

# TD SYNnex Elevates StreamOne® with New Commerce and Security Capabilities

2024-11-12

PSA Connectors and Commerce APIs Redefine Cloud Management Experience

FREMONT, Calif., & CLEARWATER, Fla.--(BUSINESS WIRE)-- As part of its commitment to innovation and customer growth, TD SYNnex (NYSE: SNX) is introducing several new powerful, customer-centric capabilities for StreamOne®, its global cloud platform. These features further solidify StreamOne® as the ultimate destination for XaaS innovation, empowering partners to grow and scale in a rapidly evolving digital landscape.

"StreamOne® is more than just a marketplace – it is where all clouds meet," said Sergio Farache, Chief Strategy and Technology Officer at TD SYNnex. "It is a complete platform that includes a marketplace function, and also adds functionality to enable a seamless, end-to-end journey for any user, at any level. By unifying and standardizing all vendor systems into a single, consistent format, we are increasing efficiency and reducing complexity for partners, ultimately empowering them to focus on driving growth through increased digitalization of their business."

With comprehensive hyperscaler coverage, the new platform capabilities unlock efficiencies and opportunities for partners of all sizes. StreamOne® commerce API enables headless commerce, making it possible to add TD SYNnex products to partner-built marketplaces and extend ordering and full order management for customers.

StreamOne® PSA Connectors easily connect platform data with Professional Services Automation (PSA) software, providing differentiated functionality such as billing reconciliation. StreamOne® provides its users with the ability to integrate best-of-breed tools via its open API architecture, allowing them to scale and automate processes.

Additionally, StreamOne® uniquely provides real-time synchronized reporting on infrastructure as a service (IaaS) consumption, enabling partners to bill continuously throughout the month rather than waiting until month-end.

The robust IaaS visibility enables unique FinOps capabilities, including detailed consumption reporting and advanced cost optimization tools.

Another key feature offered through the platform are the white-label storefronts which provide partners with a pre-built marketplace to extend the commerce and capabilities of StreamOne® to customers, all under their own brand, and without deployment or maintenance costs.

StreamOne® is also capable of providing marketplace syndication, simplifying procurement processes for hyperscaler catalogs, starting with Microsoft Azure and AppSource SaaS solutions. This feature will be exclusively showcased for the first time at Microsoft Ignite, Nov. 18-21. TD SYNEX is also piloting Security Operations (SecOps) solution that will provide partners with a more comprehensive view of their SMB customers' Azure security postures. Currently available as a limited release to select partners, the SecOps functionality will provide an all-in-one view to detect potential threats, standardize deployment of security policies across customers, and recommend products to fill security gaps. Full general availability of the SecOps solution is planned for 2025.

"StreamOne® checks every box as far as being easy to use for both me and my team, increasing our ability to work efficiently," said Andre Dowding, Managing Partner of Net Intellect and TD SYNEX customer. "Specifically, being able to see accurate, real-time changes reflected through the new enhanced PSA integration has been tremendously helpful for our business."

StreamOne® is a fully global platform with new capabilities available instantaneously across all regions and has empowered over 30,000 partners to drive digital transformation. The platform's ongoing enhancements, including AI-powered tools and expanded security features, are supported by TD SYNEX's commitment to providing the enablement and programs necessary for partners to thrive in the evolving technology market.
