Company Update

April 2018

NASDAQ: FCEL    www.fuelcellenergy.com
This presentation contains forward-looking statements within the meaning of the safe harbor provisions of the Private Securities Reform Act of 1995, including, without limitation, statements with respect to the Company’s anticipated financial results and statements regarding the Company’s plans and expectations regarding the continuing development, commercialization and financing of its fuel cell technology and business plans. All forward-looking statements are subject to risks and uncertainties that could cause actual results to differ materially from those projected. Factors that could cause such a difference include, without limitation, changes to projected deliveries and order flow, changes to production rate and product costs, general risks associated with product development, manufacturing, changes in the regulatory environment, customer strategies, unanticipated manufacturing issues that impact power plant performance, changes in critical accounting policies, potential volatility of energy prices, rapid technological change, competition, and the Company’s ability to achieve its sales plans and cost reduction targets, as well as other risks set forth in the Company’s filings with the Securities and Exchange Commission (SEC). The forward-looking statements contained herein speak only as of the date of this presentation. The Company expressly disclaims any obligation or undertaking to release publicly any updates or revisions to any such statement to reflect any change in the Company’s expectations or any change in events, conditions or circumstances on which any such statement is based.

The Company may refer to non-GAAP (generally accepted accounting principles) financial measures in this presentation. The Company believes that this information is useful to understanding its operating results and assessing performance and highlighting trends on an overall basis. Please refer to the Company’s earnings release for further disclosure and reconciliation of non-GAAP financial measures.

The information set forth in this presentation is qualified by reference to, and should be read in conjunction with, our Annual Report on Form 10-K for the fiscal year ended October 31, 2017, filed with the SEC on January 11, 2018, our Quarterly Report on Form 10-Q filed with the SEC on March 8, 2018, and our earnings release for the first quarter ended January 31, 2018, filed as an exhibit to our Current Report on Form 8-K filed with the SEC on March 8, 2018.
FuelCell at a Glance

Delivering Clean Innovative Solutions for the Global Supply, Recovery and Storage of Energy

**Snapshot**

- Design & Manufacture
- Turnkey Project Development
- Plant Operation

**Company Overview**

- FuelCell Energy designs, manufactures, undertakes project development, installs, operates and maintains megawatt-scale fuel cell systems
- Serving utilities, industrial and large municipal power users with solutions that include:
  - Both utility-scale and on-site power generation
  - Carbon capture
  - Local hydrogen production for transportation and industry
  - Long duration energy storage

**Global Customers**

- Pfizer
- LIPA
- ExxonMobil
- Dominion
- Avangrid
- Edison
- Calpine
- Pacific Gas & Electric
- Peabody Energy
- TOYOTA
- Posco Energy
- NRG Yield
- CenterPoint
- KEPCO
- Cenovus
- CNART
- Hartford Hospital
- MHI
- Fraietech
- Kosmo
- NEDO
- National Ministry of Infrastructure and Resources

**Investment Highlights**

- > $1 Billion recent project awards in addition to our backlog of $638 million as of Q1-18
- Sizeable global market potential
- Compelling business model – Power plant / project sales, recurring high margin generation portfolio, Services
- Targeting industry leaders with the market's only MW-class fuel cell solution – Produced over 7 million MWh's
- Versatile fuel cell platform supports global opportunities with carbon capture, distributed hydrogen & storage
- Project profiles attract private capital
- Experienced management team with decades of power industry and industrial experience

![BACKLOG - First Quarter 2015-2018](chart.png)
### Financial Overview

**Q1 2018 revenue of $38.6 million vs $17.0 million in Q1 2017**

**Increase in cash and cash equivalents of $28 million in the first quarter**
- Total cash and cash equivalents of $115.4 million; $40 million financing availability

**Backlog & product awards total $1.6 billion**
- Backlog of $638.5 million, up 46% year over year

---

### Revenue Classification

**Note:** Project awards are projects for which the Company has been selected but has not yet entered into definitive agreements.

---

**Positive momentum on pathway to sustainable profitability**
Building Sustainable Profitability

Building sustainable recurring cash flow

- 11.2 MW existing generation generates ~ $8 million per year in revenue
- 62.3 MW under construction would contribute ~$50 - $60 million per year in additional revenue
- New projects under development are incremental
- Assets to be built with project debt.

### MWs on Balance Sheet

- **Current Generating Portfolio**
- **Backlog / Awards**
- **Future Awards**

### Construction / Commercial Operation Timing

Energy Trends Driving Demand

1. Grid resiliency & reliability
   - Predictable on-site generation enhances resiliency and reliability
   - Avoids costs and risks of interruption and transmission siting issues
   - Enables infrastructure capital-avoidance for utility planning authorities

2. Emission reductions & De-carbonization
   - Highly efficient electro-chemical process, no burning
   - Scalable & cost effective carbon capture that generates power while capturing CO₂ & eliminating ~70% of coal/gas-fired power station NOₓ emissions

3. Distributed hydrogen
   - Tri-generation for high-purity hydrogen plus power & heat
   - Affordable and significantly cleaner than steam reforming
   - Several Transportation & Industrial applications
   - Carbon-negative hydrogen when using renewable biogas

4. Supporting intermittent renewable deployment
   - Storage supports intermittent power: short duration (<4 hours) & long duration (6+ hours or days)
   - Batteries meet short duration
   - Reversible fuel cells for scalable and affordable long-duration solution, with high round-trip efficiency

Global Market

1. 2 GW Equipment Market
   - $7 B Equipment Market
   - $11 B Services Market
   - $29 B 20-year fuel sales

2. 16 GW Equipment Market
   - $49 B Equipment Market
   - $73 B Services Market
   - $215 B 20-year fuel sales

3. 1 GW Equipment Market
   - $4 B Equipment Market
   - $5 B Services Market
   - $8 B 20-year fuel sales

4. 3 GW Equipment Market
   - $10 B Equipment Market
   - $15 B Services Market

1. Predictable distributed clean power generation
2. Carbon capture for power generation and industry
3. Distributed hydrogen for transportation and industrial applications
4. Long-duration storage supports increased renewables penetration
- Power supplied with predictable on-island generation avoiding transmission investments
- Unused industrial land converted to income generating property
- State-of-the-art utility microgrid application supporting critical building loads with independent capabilities
- Replicable model for other customers evaluating similar structures

• Making the Power Grid Cleaner and More Resilient
• Adding Reliable Microgrid to a Utility Energy Portfolio
How it works

• Fuel cells separate carbon dioxide from a power plant’s exhaust stream, making the carbon dioxide easier to capture and sequester (90% CO₂ capture, 70% NOX elimination)

• This process could vastly reduce carbon dioxide emissions by dramatically reducing carbon capture costs

• A breakthrough in commercialization would lead to a global marketplace

Benefits

<table>
<thead>
<tr>
<th>Concentrates CO₂</th>
<th>Cleaner air</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carbonate fuel cells can concentrate up to 90% of carbon emissions that come out of power plants – concentrated emissions can be captured and stored deep underground</td>
<td>Removing carbon dioxide from the power plant exhaust eliminates a majority of smog-producing emissions</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Generates power</th>
<th>Customizable</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carbon capture using fuel cells generates power, critical to the commercialization of carbon capture</td>
<td>Modular solutions, allowing for gradual investments that help utilities meet carbon-capture targets over time</td>
</tr>
</tbody>
</table>

SureSource Hydrogen and SureSource Storage

SureSource Hydrogen and SureSource Storage System

- Efficient and cost effective energy storage for long discharge durations where input power is converted to hydrogen and stored
- Stored hydrogen can be converted back to power at high efficiency or exported to hydrogen user, e.g. industrial user or vehicle fueling station

Hydrogen for Mobility and Industrial Use

- Efficient, clean production of hydrogen near end users
- Co-production of power enhances hydrogen affordability. Reduced transport distance reduces cost and emissions of hydrogen delivery

Hydrogen Based Storage and Electrolysis

- Efficient and cost effective energy storage for long discharge durations where input power is converted to hydrogen and stored
- Stored hydrogen can be converted back to power at high efficiency or exported to hydrogen user, e.g. industrial user or vehicle fueling station
