NetApp Acquires JetStream Software to Advance Cyber Resilience and Data Protection for the AI Era

2026-08-06

Acquisition strengthens NetApp's portfolio with recovery and mobility capabilities that help organizations reduce risk and accelerate transformation

SAN JOSE, Calif.--(BUSINESS WIRE)-- NetApp® (NASDAQ: NTAP), the Intelligent Data Infrastructure company, today announced it has acquired JetStream Software, a leader in VMware disaster recovery and migration.

Enterprise customers continue to rely on VMware for many of their most critical applications. As organizations evaluate cloud adoption, they often seek ways to transition workloads while minimizing cost, complexity, and operational disruption. For many, disaster recovery serves as a practical first step, with production workloads migrating over time as cloud strategies mature.

"Data has become the foundation for business growth, AI innovation, and operational continuity," said George Kurian, Chief Executive Officer at NetApp. "As customers look to unlock greater value from their data while strengthening protection against disruption, bringing JetStream into NetApp expands our ability to help keep their data secure, available, and ready for what comes next. This acquisition further positions NetApp as a leader in enterprise resilience and data protection."

By adding JetStream's technology to NetApp, customers will be able to protect VMware environments running on virtually any storage platform and recover them on NetApp first-party storage offerings such as Azure NetApp Files.

"Customers want to move to the cloud on their schedule, not their infrastructure's schedule," said Pravjit Tiwana, Senior Vice President and General Manager, Cloud Storage and Services at NetApp. "JetStream helps customers start with disaster recovery and seamlessly evolve to production in the cloud. Together, we're making our cloud offerings within hyperscalers the easiest destination for enterprise VMware workloads."

JetStream complements NetApp's existing SnapMirror technology, which remains the preferred replication solution for NetApp environments. Together, the combined portfolio enables NetApp to protect both existing NetApp deployments, and the much broader VMware installed base running on third-party storage.

With this acquisition, NetApp expands its ability to help enterprises protect applications, accelerate cloud migration, and modernize infrastructure while giving customers the flexibility to move at their own pace.

"Customers want solutions that help them evolve their environments without adding complexity," said Tom Critser, Co-Founder and Chief Executive Officer at JetStream Software. "Joining NetApp allows us to bring our technology to more organizations worldwide and deliver even greater value by combining our expertise with NetApp's industry-leading data services and cloud storage portfolio."

"Safe Harbor" Statement Under U.S. Private Securities Litigation Reform Act of 1995

This press release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These statements include, but are not limited to, statements about the anticipated benefits of the acquisition of JetStream Software, including the ability to strengthen protection against disruption, keep customers' data secure, available, and ready for what comes next, help enterprises protect applications, accelerate cloud migration, and modernize infrastructure, our business, economic and market outlook; our overall future prospects; demand for our AI solutions and other offerings; and our ability to deliver increasing results and value for our stakeholders. These and other important factors are described in reports and documents we file from time to time with the Securities and Exchange Commission, including the factors described under the sections titled "Risk Factors" in our most recently filed annual report on Form 10-K and quarterly report on Form 10-Q. All statements made in this release are made only as of the date set forth at the beginning of this release. We disclaim any obligation to update information contained in this press release whether as a result of new information, future events, or otherwise.

Statement of Product Direction

This press release discusses NetApp's vision for future innovation, including the anticipated alignment of JetStream Software's technology with NetApp's portfolio. This information is shared solely for informational purposes and should not be relied upon in making purchasing decisions. NetApp makes no commitment and has no obligation to develop or deliver any products, services, integrations, or any related features, material, code or functionality described herein, including any capabilities resulting from the acquisition of JetStream Software. The development, release and timing of any features or functionality for NetApp products and services, including those offering JetStream Software's technology, remains at the sole discretion of NetApp. NetApp's strategy and possible future developments, product and platform directions, and functionality, including plans related to JetStream Software's technology, are all subject to change without notice. We disclaim any obligation to update information contained in this press release whether as a result of new information, future events, or otherwise.

About NetApp

For more than three decades, NetApp has helped the world's leading organizations navigate change – from the rise of enterprise storage to the intelligent era defined by data and AI. Today, NetApp is the Intelligent Data Infrastructure company, helping customers turn data into a catalyst for innovation, resilience, and growth.

At the heart of that infrastructure is the NetApp data platform – the unified, enterprise-grade, intelligent foundation that connects, protects, and activates data across every cloud, workload, and environment. Built on the proven power of NetApp ONTAP, our leading data management software and OS, and enhanced by

automation through the AI Data Engine and AFX, it delivers observability, resilience, and intelligence at scale.

Disaggregated by design, the NetApp data platform separates storage, services, and control so enterprises can modernize faster, scale efficiently, and innovate without lock-in. As the only enterprise storage platform natively embedded in the world's largest clouds, it gives organizations the freedom to run any workload anywhere with consistent performance, governance, and protection.

With NetApp, data is always ready – ready to defend against threats, ready to power AI, and ready to drive the next breakthrough. That's why the world's most forward-thinking enterprises trust NetApp to turn intelligence into advantage.
