APPENDIX C: TOXIC SUBSTANCE REDUCTION PLAN OBJECTIVES

TOXIC SUBSTANCE REDUCTION PLAN OBJECTIVES

The following are plan objectives taken from respective Toxic Substance Reduction Plans. This information is included in this Report on Plans in order to satisfy s.26(2)3 of O.Reg.455/09.

Arsenic, Cadmium, Chromium, Cobalt, Copper, Lead, Manganese, Nickel, Selenium, Vanadium, Zinc

Brigus does not intend to reduce its use of arsenic, cadmium, chromium, cobalt, copper, lead, manganese, nickel, selenium, vanadium and zinc because these substances are by-products of production, naturally occurring in ore from which gold is extracted and reducing their use would not benefit business growth, but Brigus is committed to ensuring their processing, emission and disposal are handled in a safe and responsible manner. While Brigus does not intend to reduce the use of the aforementioned metals, technologies that may reduce the releases of these substances will be monitored and considered for implementation if proven technically and economically feasible.

Nitric Acid

Brigus is committed to playing a leadership role in protecting the environment. Wherever feasible, Brigus will eliminate or reduce the use and creation of nitric acid in full compliance with all federal and provincial regulations.

Particulate Matter, PM-10, PM-2.5

Brigus is committed to playing a leadership role in protecting the environment. Wherever feasible, Brigus will eliminate or reduce the use and creation of particulate matter in full compliance with all federal and provincial regulations.

Cyanides (Ionic)

The objectives of this Plan are as follows:

- provide support for the Facility's position with respect to the Statement of Intent of this Plan; and
- document how, by preparing this Plan, the Facility has fulfilled the applicable requirements under the TRA and O.Reg.455/09 with respect to the Toxic Substance.

*Note: Brigus Gold is now McEwen Mining Inc.
