Delphi Partners with Rosenberger to Deliver High Performance Automotive Ethernet Solutions

2017-04-06

GILLINGHAM, England, April 6, 2017 /PRNewswire/ -- Delphi Automotive PLC (NYSE: DLPH) has completed a strategic agreement with high frequency connectivity company Rosenberger to enhance capabilities in high-speed data transmission.

"Connected vehicle platforms require robust electrical architectures to transfer greater amounts of data at increasingly faster rates and this partnership allows Delphi to work with another industry leader to support common standards for automotive Ethernet architecture," said Majdi Abulaban, senior vice president and president of the Delphi electrical/electronic architecture segment and president of the engineered components group.

Rosenberger is one of the leading companies in Automotive radio frequency (RF) connection systems with broader experience in other industries such as telecommunication, medical and test and measurement. Rosenberger provides state-of-the-art connection systems to enable future ADAS, automated driving and connected vehicle platforms.

Delphi and Rosenberger have agreed to engage in a technical partnership and will collaborate on high-performance, cost-effective, high-speed Ethernet solutions for the transportation market.

About Delphi

Delphi Automotive PLC is a high-technology company that integrates safer, greener and more connected solutions for automotive and transportation sectors. Headquartered in Gillingham, U.K., Delphi operates technical centers, manufacturing sites and customer support services in 46 countries. Visit delphi.com

About Rosenberger

Rosenberger Hochfrequenztechnik GmbH & Co. KG was founded in 1958. Rosenberger, a family owned company, ranks today among the world-wide leading manufacturers of standard and customer-specific connectivity solutions in high frequency, high voltage and fibre optic technology.
