Delphi Successfully Completes First Coast-to-Coast Automated Drive

2015-04-02

GILLINGHAM, England--(BUSINESS WIRE)-- Delphi Automotive PLC (NYSE: DLPH) has completed the longest automated drive in North America, traveling from San Francisco to New York in the first coast-to-coast trip ever taken by an automated vehicle. Nearly 3,400 miles were covered with 99 percent of the drive in fully automated mode.

Delphi's automated vehicle successfully managed complex traffic scenarios including this over-sized lane-encroaching vehicle. (Photo: Business Wire)

The drive was used by Delphi engineers to research and collect information that will help

further advance active safety technology – the most rapidly growing technology sector of the auto industry. The team collected nearly three terabytes of data—about 30 percent of all of the printed material in the Library of Congress.

“Our vehicle performed remarkably well during this drive, exceeding our expectations,” said Jeff Owens, Delphi chief technology officer. “The knowledge obtained from this trip will help optimize our existing active safety products and accelerate our future product development, which will allow us to deliver unsurpassed automotive grade technologies to our customers.”

The nine-day trip crossed 15 states and the District of Columbia. Along the way, the vehicle encountered complex driving situations such as traffic circles, construction zones, bridges, tunnels, aggressive drivers and a variety of weather conditions.

Delphi’s automated driving vehicle is equipped with a full suite of advanced technologies and features, many of which are already on the market today including collision mitigation, integrated radar and camera systems, forward

collision and lane departure warning.
