EDITED TRANSCRIPT

MRK - Q4 2019 Merck & Co Inc Earnings Call

EVENT DATE/TIME: FEBRUARY 05, 2020 / 1:00PM GMT

OVERVIEW:

Co. reported 4Q19 total Co. revenues of \$11.9b. Expects 2020 revenue to be \$48.8-50.3b and non-GAAP EPS to be \$5.62-5.77.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

CORPORATE PARTICIPANTS

Franklin K. Clyburn *Merck & Co., Inc. - Chief Commercial Officer & Executive VP*

Kenneth C. Frazier *Merck & Co., Inc. - Chairman, President & CEO*

Kevin Ali

Peter Dannenbaum *Merck & Co., Inc. - VP of IR*

Robert M. Davis *Merck & Co., Inc. - Executive VP of Global Services & CFO*

Roger M. Perlmutter *Merck Research Laboratories - President*

CONFERENCE CALL PARTICIPANTS

Andrew Simon Baum *Citigroup Inc, Research Division - Global Head of Healthcare Research and MD*

Christopher Thomas Schott *JP Morgan Chase & Co, Research Division - Senior Analyst*

Daina Michelle Graybosch *SVB Leerink LLC, Research Division - MD & Senior Research Analyst*

David Reed Risinger *Morgan Stanley, Research Division - MD in Equity Research and United States Pharmaceuticals Analyst*

Geoffrey Christopher Meacham *BofA Merrill Lynch, Research Division - Research Analyst*

Louise Alesandra Chen *Cantor Fitzgerald & Co., Research Division - Senior Research Analyst & MD*

Mara Goldstein *Mizuho Securities USA LLC, Research Division - MD of Equity Research Department*

Seamus Christopher Fernandez *Guggenheim Securities, LLC, Research Division - Senior Analyst of Global Pharmaceuticals*

Stephen Michael Scala *Cowen and Company, LLC, Research Division - MD & Senior Research Analyst*

Terence C. Flynn *Goldman Sachs Group Inc., Research Division - MD*

Timothy Minton Anderson *Wolfe Research, LLC - MD of Equity Research*

Umer Raffat *Evercore ISI Institutional Equities, Research Division - Senior MD & Senior Analyst of Equity Research*

PRESENTATION

Operator

Good morning. My name is Carlo, and I will be your conference operator today. At this time, I would like to welcome everyone to the Merck & Co. quarter 4 sales and earnings conference call. (Operator Instructions)

I would now like to turn the call over to Peter Dannenbaum, VP of Investor Relations. Please go ahead.

Peter Dannenbaum - *Merck & Co., Inc. - VP of IR*

Thank you, Carlo, and good morning. Welcome to Merck's Fourth Quarter 2019 Conference Call.

Today, I'm joined by Ken Frazier, our Chairman and Chief Executive Officer; Rob Davis, our Chief Financial Officer; Dr. Roger Perlmutter, President of Merck Research Labs; and Kevin Ali, who will be named Chief Executive Officer of the new company we have announced today. Each will have prepared remarks. In addition, I am also joined by Frank Clyburn, our Chief Commercial Officer; and Mike Nally, our Chief Marketing Officer, who will be available for the Q&A portion of the call.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Before I turn the call over to Ken, I'd like to point out a few items. You will see that we have items in our GAAP results such as acquisition-related charges, restructuring costs and certain other items. You should note that we've excluded these from our non-GAAP results and provide a reconciliation in our press release. We have also provided a table in our press release to help you understand the sales in the quarter for the business units and products.

I would like to remind you that some of the statements that we make during today's call may be considered forward-looking statements within the meaning of the Safe Harbor provision of the U.S. Private Securities Litigation Reform Act of 1995. Such statements are made based on the current beliefs of Merck's management and are subject to significant risks and uncertainties. If our underlying assumptions prove inaccurate or uncertainties materialize, actual results may differ materially from those set forth in the forward-looking statements. Our SEC filings, including item 1A in the 2018 10-K, identify certain risk factors and cautionary statements that could cause the company's actual results to differ materially from those projected in any of our forward-looking statements made this morning. Merck undertakes no obligation to publicly update any forward-looking statements.

You can see our SEC filings as well as today's earnings release on merck.com. We have also posted a presentation to the Investors section of merck.com, which includes some of the highlights from our results and announcement.

With that, I'd like to turn the call over to Ken.

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Thank you, Peter. We're very pleased to speak with you this morning as we close out what we consider to be an exceptional year for Merck, and we're excited to announce our intention to create 2 leading growth companies through the spin-off of our Women's Health, Legacy Brands and Biosimilar product into a new company. As you can see from our results and our 2020 guidance, Merck had an extraordinary year and is in a position of operational and financial strength driven by strong execution of our strategy and focus on our key growth drivers and innovative pipeline. It is this position of strength borne of that focus that gives us the confidence to do what we believe will best position us to deliver even greater value to patients and shareholders.

Throughout my entire tenure as CEO, we have consistently focused on science as core to our strategy to not only benefit the most patients but also as a means of creating the most value. As you've seen, Merck's portfolio has evolved from one focused largely on primary care products to one focused on oncology, vaccines, hospital and Animal Health. It is this purposeful shift, coupled with greater prioritization and focus on key growth drivers, that has led to the unprecedented growth that we are now experiencing. Going forward, we see even greater opportunities to invest behind our innovative growth drivers. In placing greater focus and prioritization behind these products, we must also think carefully about how to make the best possible use of the remainder of our expansive human health portfolio, which is comprised of more than 160 products in total.

Our responsibility to patients and shareholders has led us to think about how we can maximize the impact of this vast array of human health products. Therefore, after careful consideration over time, we've made the decision to separate into 2 companies: one, a research-intensive biopharmaceutical leader; the other, a new company focused on becoming a leader in Women's Health with the capability to realize the full potential of a portfolio of trusted and medically important legacy products and a rapidly expanding biosimilars business. By spinning off NewCo as a distinct business, we can better prioritize and support a set of products that no longer fit in Merck's strategic framework but which remains important to public health and the patients who rely on them and which if managed and resourced appropriately present real opportunities for growth.

We're also mindful of the changing industry landscape and believe that evolving our operating model in this way will allow Merck to benefit from an even more intense focus on breakthrough science and innovation. As I stated at our Investor Day in June, our mission and rich legacy of inventing to save and improve lives is the foundation of our company. The separation of NewCo will help us in our aspiration to be the premier research-intensive biopharmaceutical company by allowing us to focus on innovations that prevent and treat diseases. And over the past few years, we have seen how more focus and more prioritization leads to more growth, more efficiency and more value creation.

The spin-off will also create significant opportunities for NewCo. As an independent company, NewCo will pursue its strategic intent of becoming a global leader in Women's Health, an area where the future opportunities are significant. In addition to the growth potential in Women's Health,

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

NewCo's growth will be fueled by more fully realizing the full potential of a portfolio of trusted Legacy Brands in pain, dermatology, cardiovascular and other areas as well as its rapidly expanding biosimilars business. This new company will have the strategic freedom to pursue additional growth opportunities through life cycle management and targeted acquisitions and partnerships in Women's Health, dermatology and other fields.

NewCo will be led by a highly experienced leadership team, including Kevin Ali who has been named Chief Executive Officer. Kevin has a proven track record of leadership at Merck, with deep experience in global pharmaceutical markets and diverse therapeutic areas. In addition, NewCo's Board will be chaired by Carrie Cox, who has extensive experience in pharmaceutical commercialization, particularly in Women's Health as well as broad leadership and Board experience, including as former Chairman and CEO of Humacyte, former Chairman of Array BioPharma and as President of Global Pharmaceuticals at Schering-Plough prior to its merger with Merck. We're confident that NewCo will be in experienced and capable hands with this leadership team.

Our industry faces emerging challenges, such as the rising cost of innovation and increasing pressures around pricing and market access. In this environment, we must maximize our opportunities to act with greater operational agility, efficiency and productivity. As separate, more focused companies with more optimal resource allocation, both Merck and NewCo will be better positioned to continue to positively impact the lives of patients, improve global public health and achieve faster growth. As a result, we expect Merck shareholders to benefit through ownership of 2 focused companies, each with attractive financial characteristics and growth profiles.

In summary, we are seeing the benefit of focusing our organization on its best growth opportunities. As we look out to 2024, we believe the strength of our business is underappreciated. We are more confident than consensus on every key financial metric, including revenue, operating margins and EPS growth. Our commitment to maintaining and growing the Merck dividend is evidence of the confidence we have in the long-term prospects for our business. Our fundamental operating and financial strengths allow us to take bold steps to stay ahead of the curve by reshaping our operating structure, focusing and streamlining Merck, enabling Merck to become an even stronger, more agile and faster-growing company. I strongly believe that this is the right thing for patients, for public health and for shareholders.

With that, I'll now pass it on to Rob to discuss our results and provide more details on the spin-off. Rob?

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Thanks, Ken, and good morning, everyone. I'm excited to speak to you this morning about our 2019 results as well as our decision to spin-off a portion of our human health business, a decision that will enhance the value of both Merck and NewCo. 2019 was a year of exceptional growth for our business, with revenues increasing 13% and non-GAAP EPS increasing 21%, excluding the impact of foreign exchange. Our strong performance reflects the continued execution of our science-led strategy, and we expect our business momentum to continue, particularly as we enhance our focus on our key growth drivers through the spin-off.

I'll start by highlighting our strong fourth quarter results before providing more details on the transaction and 2020 guidance. Total company revenues were \$11.9 billion in the quarter, an increase of 8% year-over-year or 9% excluding the negative impact from foreign currency. Both our human health and Animal Health divisions contributed to the growth this quarter. The remainder of my comments pertaining to sales will be on an ex-exchange basis.

Our human health revenues grew 8%, led by products in oncology and hospital. In oncology, KEYTRUDA fourth quarter sales were \$3.1 billion, and for the full year, sales exceeded \$11 billion, representing 58% growth versus 2018. In the U.S., growth was driven by strong demand across all indications. KEYTRUDA continues to lead across many indications, including lung, bladder and head and neck cancers with strong momentum in adjuvant melanoma and renal cell carcinoma, where we are seeing strong uptake across all patient subgroups.

Outside the U.S., KEYTRUDA sales in the quarter grew 50%, driven by lung globally with reimbursement for KEYNOTE-189 now secured across all major markets in the EU and strong uptake in lung following approvals in Japan and China. We are also seeing positive uptake from early launches in both renal cell carcinoma and adjuvant melanoma in the EU and expect to see strong global growth as these and other new indications continue to roll out.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Our results also reflect continued strength for both Lynparza and Lenvima, important products from our collaborations with AstraZeneca and Eisai, respectively. Lynparza continues to have strong growth in ovarian cancer and maintains a greater than 60% total patient share in the PARP inhibitor class in the United States. Growth of Lenvima benefited from the launch of the endometrial carcinoma indication in combination with KEYTRUDA and continued strong demand in first-line hepatocellular carcinoma where Lenvima is now the leading treatment agent.

Our vaccines business declined this quarter due to the impact from the replenishment of GARDASIL to the CDC stockpile in 2018 and our borrowing from the stockpile in the fourth quarter of 2019, which notably impacted the year-over-year comparison of GARDASIL revenues by \$245 million on a combined basis. Excluding these impacts, GARDASIL revenues grew 16%, driven by continued strong underlying global demand.

Our hospital business benefited from 24% growth in BRIDION, which reached \$1 billion in annual sales for the first time this quarter. Growth was largely driven by an increased share in the U.S. reversal market.

For the full year, we achieved strong growth of 14% in our human health business driven by our growth pillars across most geographies. Animal Health revenues increased 10% this quarter to \$1.1 billion. Growth for the quarter was driven largely by the products acquired in the Antelliq acquisition.

Now turning to the rest of our P&L. My comments will be on a non-GAAP basis. Gross margin was 72.6% in the quarter, a decrease of 240 basis points year-over-year, primarily reflecting the impact of unfavorable manufacturing variances and higher inventory write-offs.

Operating expenses of \$5.2 billion increased 10% year-over-year. Administrative and promotional expenses drove higher SG&A costs in the quarter while clinical development spend and costs associated with our discovery efforts were responsible for the increase in R&D expense. Other income and expense was positively impacted by income from our equity securities portfolio, partially offset by higher net interest expense. Our effective tax rate for the quarter was 16.9% driven by lower and favorable earnings mix. Taken together, we earned \$1.16 per share, an increase of 12% excluding exchange.

Now turning to our announced spin-off. As Ken noted, by further evolving our operating model and separating into 2 simpler, more focused and agile companies, both will be better positioned to respond to the changing external landscape, improve efficiency and accelerate growth, creating greater value for patients and shareholders than would be achieved as a single company. Spinning off NewCo accelerates Merck's revenue growth by up to 1 percentage point on a compounded average basis through 2024, but more importantly, it allows Merck to enhance focus on its key growth drivers and robust pipeline. This gives us confidence that Merck will realize even greater incremental revenue growth over time. We will also benefit from more streamlined processes and operations, enabling further operating model efficiencies across the value chain.

For context, the products to be spun off into NewCo represents about 15% of Merck's human health revenues based on 2020 forecast. While consuming a much larger share of our operations and resources, in fact, separating NewCo will reduce Merck's human health manufacturing footprint by about 25%, the number of products by 50% and the number of SKUs by 60%. As a result of a more optimized operating model, Merck will achieve even higher operating margins over time, creating additional headroom to invest in innovation, which we continue to believe is the key to our long-term growth and value creation, as Ken has referenced.

Merck will continue to benefit from broad commercial scale driven by its key growth pillars in oncology, vaccines, hospital and animal health as well as our diabetes franchise. Merck will continue to have a strong balance sheet with significant cash flows and financial flexibility, which will allow for investments in innovation and meaningful business development to augment its pipeline and portfolio while continuing to return capital to shareholders. We expect to complete the transaction in the first half of 2021. Until then, we will remain focused on continuing to successfully execute our strategy and maintaining our strong financial and operational performance.

Now let's move to our outlook for 2020, a year in which we continue to operate as a combined entity. My remaining comments will be on a non-GAAP basis. We expect full year 2020 revenue to be between \$48.8 billion and \$50.3 billion, which represents 4% to 7% growth versus 2019. This range assumes a negative impact from foreign exchange of less than 1 percentage point using mid-January rates.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Our gross margin will be roughly 75.5%. We expect operating expenses to increase by a low single-digit rate year-over-year due to higher R&D spending as we remain committed to fully funding the meaningful opportunities in our pipeline. SG&A expenses will remain tightly managed. We expect other expense of roughly \$200 million driven by higher net interest expense. We expect our tax rate to be roughly 17.5% to 18.5% for the year. We project average diluted shares to be 2.54 billion for 2020, and we expect EPS to be between \$5.62 and \$5.77, which represents growth of 8% to 11%, including a roughly 1.5 percentage point negative impact from foreign exchange using mid-January rates.

Longer term, Merck continues to expect strong revenue growth driven by growing demand for our innovative products. When looking out to 2024, we believe our revenue growth potential is underappreciated, even more so as we begin to realize the benefits of this transaction.

We continue to expect meaningful operating margin expansion over time. The separation of NewCo enables \$1.5 billion in pretax operating efficiencies ratable over 3 years. While, initially, Merck's operating margins will decline slightly, we expect to achieve operating margins of greater than 40% in 2024, higher than Merck would have achieved as a combined company. The transaction is expected to result in \$8 billion to \$9 billion of proceeds from a special tax-free dividend from NewCo.

Merck's capital allocation priorities remain unchanged, and we expect to maintain a very solid financial and credit profile. First and foremost, we will fund our best growth opportunities through investments in R&D, product launches and capacity expansions, and we believe the spin-off allows us to better focus on these activities.

Merck's dividend will be unaffected by this transaction, and we anticipate future dividend increases from the current 2020 dividend of \$2.44 per share post separation, with the goal of achieving a 47% to 50% payout ratio over time. We will continue to have ample capacity for value-enhancing business development, and finally, we will continue to repurchase shares as a way to return excess cash to shareholders.

Turning now to NewCo's financial profile. The products represented by the new company portfolio are expected to achieve 2020 revenue of approximately \$6.5 billion with an operating margin of approximately 45% as part of Merck. As an independent company, NewCo is expected to achieve low single-digit revenue growth off of a 2021 base of \$6 billion to \$6.5 billion. Taking into consideration the cost to operate as an independent company, operating margins for NewCo are expected to be in the mid-30% range and increase over time. And finally, we anticipate EBITDA margins to be in the low to mid-40% range in 2021 and also increase over time.

NewCo will have strong cash flows and a balance sheet positioned to invest in growth opportunities and expects to pay a meaningful dividend, which will be at least as competitive as any likely peer company and entirely incremental to Merck's dividend. In total, we expect combined EPS of NewCo and Merck together to initially be nominally lower than what Merck would have achieved without the spin-off, but as a result of the incremental growth that NewCo will achieve stand-alone, combined with the benefit of the operating efficiencies that Merck will realize, we expect that shareholders owning both companies will realize higher EPS within 12 to 24 months.

In summary, we are confident that through the spin-off, both companies will have strong prospects for future success and sustainable profitable growth given the clear benefits each will realize as independently operated entities, including enhanced strategic and operational focus on their key drivers to accelerate growth, improved agility to anticipate and respond to customer needs and evolving market dynamics, simplified operating models with reduced complexity and improved efficiencies, optimized capital structures and resource allocation to pursue their distinct strategic agendas and improved financial profiles making for unique and compelling investment cases. We are excited by this opportunity to create 2 patient-focused growth companies and look forward to continuing to deliver significant long-term value to our patients and shareholders.

With that, I'd like to turn the call over to Roger.

Roger M. Perlmutter - Merck Research Laboratories - President

Thanks, Rob. Looking back on 2019 and in particular, on our fourth quarter results, there is much to celebrate. In December, our KEYNOTE-057 data were reviewed at an FDA oncologic drugs advisory committee meeting, which was followed 3 weeks later by FDA approval of KEYTRUDA as monotherapy for the treatment of certain patients with high-risk non-muscle-invasive bladder cancer. This represents the 23rd FDA-approved indication for KEYTRUDA, broadening still further the benefit that can be expected from the use of KEYTRUDA in the urologic setting.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

KEYTRUDA also gained 3 new approvals in Japan during the fourth quarter as combination therapy in the first-line treatment of advanced renal cell carcinoma based on the KEYNOTE-426 study and for the first-line treatment of metastatic squamous cell carcinoma of the head and neck either as monotherapy or when combined with chemotherapy based on results of the KEYNOTE-048 trial. The KEYNOTE-048 data also permitted approval of KEYTRUDA in Europe with a similar indication. Finally, we gained approval of KEYTRUDA in China for the treatment of metastatic squamous cell carcinoma of the lung in combination with chemotherapy based on data obtained in the KEYNOTE-407 study.

Substantial progress was also made in the registration of Lynparza, our leading PARP inhibitor that we are developing in collaboration with colleagues at AstraZeneca. At the December FDA oncologic drugs advisory committee, the majority of committee members supported the use of Lynparza as first-line maintenance therapy for patients with germline BRCA-mutated metastatic pancreatic cancer whose disease had not progressed after at least 16 weeks of first-line platinum-based chemotherapy, all based on data from the Phase III POLO trial, which demonstrated a 47% reduction in the risk of disease progression or death in the Lynparza treatment arm. FDA granted approval for Lynparza in this setting at the end of 2019.

I should also note that data from our PAOLA-1 trial of Lynparza were accepted by the FDA for priority review with a PDUFA date of the second quarter of this year. In PAOLA-1, maintenance Lynparza plus bevacizumab treatment of women with advanced ovarian cancer that have responded to first-line platinum-based chemotherapy plus bevacizumab reduced the risk of disease progression or death by 41%. Additional files supporting the use of Lynparza in the treatment of men with mutation-selected metastatic castrate-resistant prostate cancer based on the results of the Phase III PROfound study was also accepted by the FDA for priority review with a PDUFA date in the second quarter of 2020.

While we were clearly very active in advancing new cancer treatments during the fourth quarter, we also made important progress in other areas. For example, in the management of highly resistant bacterial infections, the Committee for Medicinal Products for Human Use of the European Medicines Agency adopted a positive opinion for RECARBRIO, our novel combination of imipenem, cilastatin and relebactam, for the treatment of infections due to aerobic gram-negative bacteria demonstrated with other agents. RECARBRIO is also under priority review by the FDA for the treatment of adult patients with hospital-acquired or ventilator-associated bacterial pneumonia caused by susceptible organisms with a PDUFA date of June 4.

Important progress was also made in cardiovascular medicine with the completion of the Phase II VICTORIA study, in which vericiguat, a novel guanylate cyclase activator being developed in collaboration with colleagues at Bayer, was found to reduce the composite risk of heart failure hospitalization or cardiovascular mortality as compared with placebo in patients with worsening heart failure with a reduced ejection fraction who were receiving standard heart failure therapy.

Time does not permit me to list the many other regulatory and clinical milestones that we achieved in the fourth quarter. However, I cannot fail to note that ERVEBO, the first effective vaccine against an Ebola virus, was approved by the FDA and received conditional approval from the EMA for the prevention of disease caused by Zaire Ebola virus.

We have now provided more than 275,000 doses of this vaccine via experimental use protocols to support the efforts of the World Health Organization and other agencies attempting to halt the spread of Ebola virus disease in the Democratic Republic of Congo.

Approvals have also been obtained in certain African nations, including Burundi, Zambia and the Democratic Republic of Congo itself, which should greatly improve the process whereby individuals at high risk can be immunized. It has taken many years to reach this important moment. My colleagues and I feel privileged to have contributed in this way in the control of an otherwise fatal disease caused by the Zaire Ebola virus.

Lastly, I wish to comment on the spin-out of the new company that we've announced this morning. I'd begin with a deep belief in the power of simplification to enhance productivity. My colleagues and I have important objectives over the next few years that will, we hope, improve treatment for malignant disease and heart failure and provide vaccines that reduce suffering from infectious diseases. Simplification of our corporate structure can only sharpen our focus on these critically important programs. I have confidence that we can achieve this increased focus internally while providing the near-term support necessary to permit NewCo to establish itself as a highly effective separate entity.

I'll now turn the call back to Ken.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Thank you, Roger. And before turning the call over to Kevin, I'd like to take a few minutes to share with you some details on his background. Kevin brings a wealth of knowledge to NewCo based on 3 decades of pharmaceutical and commercial experience at Merck.

His experience ranges from leading different regions, including our entire international human health business and the emerging markets region, to leading markets such as Germany and Turkey. Most recently, Kevin has been instrumental in evaluating Merck's options to optimize the entire human health portfolio and in envisioning what success looks like for NewCo while providing invaluable counsel to me and the rest of the senior management team. I'm confident that under Kevin's leadership, NewCo will reach its full potential and drive greater value for patients, shareholders and employees.

And with that, I'd like to turn the call over to Kevin.

Kevin Ali

Thanks, Ken, and good morning. I'm excited to share with you today the creation of our new company, which we believe has a remarkable opportunity to unleash the potential of a leading portfolio of assets in Women's Health, a rapidly growing Biosimilars business and a portfolio of trusted and medically important Legacy Brands. NewCo revenue was expected to be flat to declining through 2024 within Merck due to limited investment and focus. However, we believe that by allocating the appropriate resources and by focusing management's attention, NewCo will achieve sustainable growth and create value outside of Merck.

Although revenues are expected to decline in 2021 versus 2020 to a base of approximately \$6 billion to \$6.5 billion largely due to the loss of exclusivities of ZETIA in Japan and NuvaRing in the U.S., the new company will be well positioned to achieve low single-digit revenue growth off of that base. As no new LOEs loom and we have identified life cycle management and commercial investment opportunities, some already underway, NewCo will have a strong global scale and geographic diversification and as a stand-alone entity will be better positioned to capitalize on attractive opportunities across its portfolio.

NewCo will pursue global leadership and sustainable growth in Women's Health through its growing contraceptive and fertility business, including NEXPLANON, which grew 14% in 2019 and is the leading implantable long-acting reversible contraceptive worldwide with U.S. patent protection through 2027. In fact, we expect NEXPLANON to be our first billion-dollar Women's Health product. The growing \$40 billion women's health market is highly fragmented, with over 400 products in development industry-wide. NewCo will be well positioned to capitalize on this attractive market opportunity to become an industry leader through investments in both organic growth and business development opportunities and to deliver better and more innovative and holistic care to women.

NewCo growth will also be driven by Biosimilars business in the early stages of a long-term growth opportunity with 3 products currently on the market through its partnership with Samsung Bioepis. Revenues of the 3 currently marketed products are expanding rapidly and are -- and worth approximately \$250 million in 2019. NewCo is well positioned to benefit from increased biosimilar demand as markets around the world continue to seek health care cost savings through greater biosimilar adoption in a growing market.

The Women's Health and Biosimilar businesses will represent a larger proportion of NewCo's revenues over time and are expected to account for more than 50% of sales by 2024. NewCo will also have the opportunity to realize the full potential of its portfolio of globally trusted Legacy Brands through increased focus and targeted investments. Importantly, the infrastructure and cash generation within this broad portfolio provides a scale, geographic reach and capital to support the growth opportunities that the Women's Health and Biosimilar businesses present.

In addition to its strong product portfolio, NewCo's global scale and geographic reach will serve as an important competitive advantage. The company will have the capability to potentially commercialize and distribute for other innovative industry players. Finally, NewCo will be highly profitable with stable and strong cash flows. As a stand-alone company, it will be able to make the capital allocation decisions that best suits its

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

long term interests, including organic and inorganic growth opportunities, paying a meaningful dividend, debt pay down while returning cash to shareholders through share repurchase.

In summary, I'm very excited about the future of NewCo and the opportunity to work with Carrie Cox. This company will have a distinct opportunity to address the health needs of women around the world and to build off of important growth pillars such as NEXPLANON, pain and dermatology and biosimilars. Through the focused company with dedicated resources, a strong global footprint and talented and experienced employees who embody the shared values of the Merck culture, NewCo will be better positioned to create value for patients and shareholders.

With that, I'd like to turn the call back over to Peter.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Thank you, Kevin. We recognize today's upfront comments ran longer than normal so we're prepared to extend the call beyond 9:00 A.M. if necessary.

So Carlo, will you please line up the queue for Q&A.

QUESTIONS AND ANSWERS

Operator

(Operator Instructions) Our first question is from Chris Schott from JPMorgan.

Christopher Thomas Schott - JP Morgan Chase & Co, Research Division - Senior Analyst

Great. Obviously, a lot of news out today. I just had 2 really, both related to the spin. I guess first on this -- you mentioned you've been considering a deal like this or some structure for these assets for quite some time. I guess why now on the timing? Is there something that's either happened with the business or the pipeline that made this make particular sense now versus, I guess, when you've looked at this in the past?

And my second question is -- I just want to make sure I'm understanding the \$1.5 billion in operating synergies correctly. Should we think about that as a net reduction in OpEx relative to what the combined company would have spent? Or is that savings that goes to RemainCo and should be balanced against some of the standup costs that you're referring to with the NewCo?

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Okay. Thanks. This is Ken Frazier. Let me start with the why now. The reason why we're doing this now is that our fundamental and financial strength, which is being driven by the focus on our best opportunities for growth allows us now to do what's strategically correct for the company in the long term. This is about taking actions today that will assure the long-term growth and viability of Merck as well as allowing products that no longer fit into our strategic framework to prosper in a new organizational structure. So from our standpoint, this is the right time.

A few years ago, when we were looking at this, we saw the opportunity, but for example, the cash flow generation of our legacy products was being employed at that time in standing up our oncology business, which we grew from the ground up and, as you know, has been extremely successful. That success has been due to our ability to allocate capital to a business that we didn't have before and getting the entire organization focused and aligned around an opportunity that we had around KEYTRUDA and other compounds behind KEYTRUDA. So that is why we can do it now. And I've said before we are confident about our long-term growth prospects, and one of the ways in which we try to manifest that is by saying we will maintain and grow the dividend on the Merck side irrespective of losing these brands.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Okay. Rob, on the efficiencies?

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Chris, on your question, so the way you should think about the \$1.5 billion of operating efficiencies are incremental cost savings in Merck after the spin-off is completed. The standup costs that are required to support the new company are really contemplated -- if you take the fact that we commented that there's 45% operating margin for the new company within Merck and it goes to 35%, roughly mid-30s after the stand up, that 10 percentage point delta is really the standup costs. So those are not -- those are separate and independent from the \$1.5 billion of net benefits, net synergies that will be enjoyed by Merck going forward in its operating results.

Operator

Next question is from Tim Anderson from Wolfe Research.

Timothy Minton Anderson - Wolfe Research, LLC - MD of Equity Research

A couple of questions on spin and then a science question. On the new company to be spun out, will that be doing real R&D and have its own R&D engine? When you talk about sustainable growth, I'm just wondering if part of that's going to come from genuine R&D. And then on RemainCo, updated views on Animal Health. Should we assume that this new split means that the remaining parent Merck company is even more likely than ever to keep Animal Health in perpetuity?

And then last question is on the adjuvant IO opportunity for Roger. In my past discussions with you, you've been highly confident the PD-1s will work in the adjuvant setting. Recently, we saw Roche fail in bladder. There's been some time line slippage. We haven't seen any adjuvant trial time lines pulled forward. Trials stopped at an interim, unlike we have with metastatic disease and the PD-1s. So my question to you is, are you still highly confident that PD-1s are going to work broadly across tumor types in adjuvant?

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Thanks, Tim. Kevin, on the research and development capabilities of NewCo?

Kevin Ali

Thanks, Tim. Yes, NewCo will have a high-quality development capability and is really well positioned as a partner of choice for other biopharmaceutical innovators who are looking to realize commercial growth through our global scale and presence in selected international markets to increase patient access.

Over time, NewCo will build a research capability in selected therapeutic areas, starting with women's health as a core pillar of its business development strategy, and then we'll move further from there.

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Tim, on your question about Animal health, I'll start by saying we never say what's going to happen in perpetuity because we regularly review our the entire portfolio and make decisions about which parts of that portfolio belong in our portfolio and which ones will be better off.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

As we look at Animal Health, we believe, if you look at its growth, if you look at its profitability, we continue to believe that we are, in effect, advantaged owners of that business going forward. We also believe that, that is an important key growth pillar that actually helps us in the long run. As you know, there are ups and downs in the pharmaceutical business. And having a business like vaccines, having a business like Animal Health gives us the long-term stability that actually allows us to confidently pursue our R&D mission.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Right. Roger, want to add?

Roger M. Perlmutter - Merck Research Laboratories - President

Tim, on the question of the immuno-oncology in the adjuvant setting. I can't speak generally about PD-L1, PD-1 antagonist when you talk about KEYTRUDA. First of all, of course, KEYTRUDA is already effective in the adjuvant setting, as we've shown in melanoma. And we also showed effects in the neoadjuvant setting in breast cancer in the I-SPY-2 study and as well in the 522 study most recently. And that is a combined neoadjuvant-adjuvant study, and we'll be seeing the agenda and not too long a time.

And you shouldn't really expect adjuvant data to be pulled forward because, by definition, patients who are receiving adjuvant therapy are patients who have better overall survival over a longer period of time. So one expects to see those adjuvant results roll out with a more defined cadence, and I think that's exactly what we'll see. And I -- based on our success in 2 prior settings, I would think KEYTRUDA should be as successful in these things as well. In general, it works better when used earlier.

Operator

Next question is from Steve Scala of Cowen.

Stephen Michael Scala - Cowen and Company, LLC, Research Division - MD & Senior Research Analyst

One of the concerns investors have with Merck is the view that its outlook is heavily dependent on KEYTRUDA, and formation of NewCo would seem to increase this risk and concern. So Merck appears to not agree that this is a concern, and I'm wondering if you can elaborate on why.

And then second, what was the rationale for leaving JANUVIA within Merck as opposed to NewCo? It seems placing JANUVIA within NewCo would have made Merck's outlook appreciably clearer going forward.

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Well, let me start on the JANUVIA question. We continue to believe that our diabetes franchise is going to be an important contributor to Merck now and into the future. We're also continuing to do significant research in the whole cardio metabolic area. So that's an area of focus for us going forward.

In terms of the issue around KEYTRUDA concentration risks, we are mindful of that. We think KEYTRUDA revenues as a proportion of total revenues only increased by a small amount because of this. I think the most important thing that I would say about KEYTRUDA is that right now we continue to see the benefits of our focus, both in terms of R&D and commercial execution going forward. We see it as driving more growth going forward for the company. But we also see the benefits of our other opportunities in oncology.

We have more than KEYTRUDA. We have in Lenvima and Lynparza. We also have 20 molecules behind that. We also have our vaccines business on hospital, and specialty business. So we're looking to optimize our entire portfolio and augment our pipeline through business development. That's

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

how we see our future growth. Not so much these brands, which as Kevin said, left to their own, would probably decline more steeply than they are in the NewCo.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Great. Rob, anything to add?

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Yes. Steve, just to kind of build on your point about why JANUVIA in Merck as opposed to NewCo. As we looked at it, clearly, we continue to benefit from the fundamental cash flow and strength that that business give. While it's not a growing business, it's still generating a lot of cash flow that in the near-term, as we approach LOE, will continue to be important for Merck. This is an important brand for us. And frankly, if you look at the NewCo company, while the loss of exclusivity to Merck frankly does not affect our ability to deliver growth, as we've already commented, even through the loss of exclusivity in 2023, 2024, we grow each and every year through that period. So we're able to absorb the loss of exclusivity, benefit from the cash now. That type clip would be insurmountable to the new company.

And then finally, and Roger can comment on it in more detail, but we continue to do some pretty interesting science in the cardio metabolic area and feel exciting opportunities are there. And so continue to see from a scientific perspective and fit as well. For all of those reasons, we felt keeping it within Merck made more sense than moving that over to the NewCo.

Operator

Next question is from Andrew Baum of Citi.

Andrew Simon Baum - Citigroup Inc, Research Division - Global Head of Healthcare Research and MD

A couple of questions, please. Firstly, you initiated your islatravir, your oral combination trial. Is there any possibility within that and being able to differentiate your combination versus Victoza on the back of lesser weight gain, given the absence of an integrase inhibitor? And whilst still waiting for the long-acting trials to complete, does that provide any kind of commercial advantage?

And the second question relates to TIGIT. One of your competitors, Roche, has indicated they're opening a Phase III program. They've already run a head-to-head data in combination with that PD-L1 in small cell lung. I know that you have a program ongoing and have had for some time. Could you talk to your relative levels of excitement with the molecule and perhaps give us some time lines and when it may be able to enter registration trials?

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Roger?

Roger M. Perlmutter - Merck Research Laboratories - President

Right. Thank you, Andrew.

First of all, with respect to the islatravir combination, in reality we really have to wait for the data. I think that -- we're very confident in the behavior of islatravir, which we've demonstrated through our reasonably large Phase II study and also with the work that we've done with (inaudible). It's a terrific molecule. It behaves extremely well. How it will behave with this -- in the combination study, we have pretty good evidence that indicates

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

to us that it will be a leading combination and especially valuable in treatment. We also know islatravir, either by itself or potentially in combination, is a good preventive regimen. But we need to see the data from all of those, and that's what we'll be getting.

And with regard to what I call TIGIT, but you can call "TIJIT", we do have a program. We have been working on this for some time. We have studies going on, where we had tried to ask the question of whether this molecule in combination with KEYTRUDA behaves better than KEYTRUDA alone and is there any circumstance under which it could be used. We recognize that KEYTRUDA is a very impressive compound in a whole variety of different settings, so we have to find the right place in which to use it, but we're enthusiastic about it, and we're moving forward.

Operator

Our next question is from Louise Chen of Cantor.

Louise Alesandra Chen - *Cantor Fitzgerald & Co., Research Division - Senior Research Analyst & MD*

So my first question to you is that you noted in the call that you're more confident than consensus on every metric through 2024. Was wondering if you could elaborate more on what you think The Street is missing here?

And the second question is just on KEYTRUDA in Japan. Curious what kind of impact do you assume for price cuts this year for KEYTRUDA in Japan? And is there another potential price cut coming?

Peter Dannenbaum - *Merck & Co., Inc. - VP of IR*

Rob?

Robert M. Davis - *Merck & Co., Inc. - Executive VP of Global Services & CFO*

Yes, Louise, this is Rob. Thanks for the question.

Really, if you look at the comments that Ken made, he said we feel confident that The Street under-appreciates our revenue, our operating margin and our EPS growth as we look forward through time. And if you look at it the components, clearly, on revenue, we continue to believe all of our growth pillars have meaningful growth opportunity, and in most cases, continue to be underappreciated across oncology platform, within the vaccines platform, given GARDASIL and Animal Health, just to name a few. So that story, which we've been talking to you about over the last several quarters continues.

And then as you look beyond that, clearly, with the spin-off, getting up to 1 percentage point improvement in our growth rate as a result of the spin itself, that's even further growth that's not appreciated, not to mention the fact that we think through core focus and really directed efforts by our leadership team, we can drive even faster growth. So that is an important part as well.

And then as you look at operating margin, today, we've indicated that by 2024 -- or in 2024, we expect operating margins now as a result of what the spend enables, which enabling \$1.5 billion of incremental cost efficiency on top of the already improving natural mix we've been benefiting from in our business, we're going to achieve an operating margin of greater than 40% in 2024. And if they take that acceleration in operating margin, combine it with potentially accelerated EPS, when you think about us deploying the \$8 billion to \$9 billion of proceeds from this transaction, if you put that to share repurchase, for instance, you can get further acceleration.

So as you look out to 2024, that's why across those select factors, we believe The Street under-appreciates revenue, under-appreciates operating margin, under-appreciates EPS growth.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

And Frank, on the Japanese price cuts?

Franklin K. Clyburn - Merck & Co., Inc. - Chief Commercial Officer & Executive VP

Louise, it's Frank. In Japan, we did see -- or we will be seeing, I should say, in February of this year a huge sales repricing of 17.5%. We've seen significant strong performance, based off of our lung cancer indications in Japan. And because of the sales projection, February, we'll see the price reduce 17.5%.

It's also important to note that we will face another significant reduction in April. That significant reduction is going to be within the same range as the first cut in February. Important to note, that will have an impact likely on our Q1 results in Japan, but also as we take a step back, when you look at the rollout of renal cell carcinoma and other indications in Japan, we do believe despite the price cuts, over time we will be able to grow in Japan. And then I want to reinforce that if we elevate outside of Japan, we still see very significant growth in 2020 and beyond as we continue to roll out many indications globally. Very strong uptake, we're continuing to see in Europe. And as Roger mentioned, we now have 23 indications in the U.S. So we feel very good about our outlook for KEYTRUDA. Clearly, the Japan repricing will have the near-term impact in Japan, but confident as we go forward.

Operator

Next one is from Umer Raffat of Evercore.

Umer Raffat - Evercore ISI Institutional Equities, Research Division - Senior MD & Senior Analyst of Equity Research

I'd appreciate you bearing with me a little bit on it. I guess, let me start with this, a simple one, which is, can you confirm that the standalone EPS goes down by about \$1? That's first.

Second, if I add up women's health, cardiology and diversified, that's about \$6 billion, which is roughly what you're saying is what's being divested to the NewCo. But if the goal is to focus on the innovative and pharma in the RemainCo, I noticed there's a \$5 billion line for your other pharma, which is not being included. And I'm curious why that is.

And finally, I think it's very interesting that you're not doing a split. You're doing a spin, very specifically. And I also noticed when you talk about the proceeds, you're mentioning biz dev before you mention share repurchase. So it almost seems to me that there might possibly be interested in replacing that lost dollar. So my question is, are you looking at a company which is more on the pipeline side? Or is the focus more on an accretive deal, which gets to that \$1 EPS back immediately?

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Yes. Thanks for the question, Umer.

So as you look at thinking about what is the subtraction, if you will, away from Merck by pulling out this business, and I know the math you're doing to get to roughly the dollar. The only thing I would advise you on is, I don't think you're giving any credit for the operating efficiencies, the \$1.5 billion, which we said we will get ratably, which -- so that's \$500 million even in 2021, the first year, which is I think where your math is coming from. And you're not giving any credit to what we're doing with \$8 billion to \$9 billion of cash proceeds. But if you deploy that to share repurchase, in reality, that dollar you're quoting, then it goes down to \$0.60, \$0.70 in the range. So thinking of it in terms of percentage, you're closer to 15%, and we believe the answer is probably closer to 10%.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Right. Umer asked as well, what's included in NewCo?

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Yes. So if you look at the other line, the other pharma lining picks up a lot of our hospital and specialty products and fixed products like ZERBAXA, which is still early in its launch, but a product which we are very excited about. So as we look at the portfolio, those products that are sitting in the hospital specialty space are ones that we continue to believe long term will create value for us, and we wanted to maintain. And then there's other to-be-launched revenue numbers sitting in there or products that are smaller in there as well. So it really is a profile product different than what we put into the NewCo and are very in line with the core growth drivers that we've already identified.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

And then I think, Umer's last question was capital allocation priorities combined with a question about what our interest in BD might be. So let's start with Rob and then turn it over to Ken.

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Yes. So if you look at the capital allocation priorities they really remain unchanged. First and foremost, we're going to ensure we appropriately fund research and development. We're going to fund the opportunity to launch new products, and we're going to fund the capacity expansion that we have underway to ensure we have the capacity to meet what is very strong demand across all of our growth pillars in vaccines, oncology and animal health.

We will remain committed to the dividend. We've talked about that. You heard today, very importantly, we are not lowering the dividend as a result of the spinout of NewCo, we're going to hold our dividend to \$2.44, which it is in 2020 and then grow it off of that base, with the goal to get to 47% to 50% as a payout ratio. So you're actually going to see a maintained dividend growing over time, and then you have the benefit of the incremental dividend that NewCo is going to have. So all in all, you should have overall more dividend if you hold those stocks that we do today.

And then finally, as we've always said, our goal to use -- is to use excess cash flow, first and foremost, for value-creating business development. To the extent though, we can't find those or we don't find ones that bring us the combination of strategy and value, we will return excess cash to shareholders moving forward. And specifically, as you look at the \$8 billion to \$9 billion of special dividend we're going to receive from NewCo as a result of this transaction, as we said in the comments, it will be deployed either to business development or to share repurchase. It will not be used for debt pay down. And that's why I believe it will be accretive over time.

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Umer, this is Ken. I think you also asked about spin versus split. We chose spend because we thought that was the quickest path and a tax-efficient way of doing this for our shareholders.

As it relates to business development, I'll just say, as we've always said, it's an important priority. And first and foremost, we are always looking for the best science and innovation that will drive long-term growth and value for shareholders. So we're still very much focused on those deals that augment our pipeline. And you saw last year, we did a number of deals, about 80 transactions spanning licensing, technology deals and clinical collaborations. We'll continue to look for those opportunities to augment our pipeline with the best science.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Operator

Next one is Geoff Meacham of Bank of America.

Geoffrey Christopher Meacham - *BofA Merrill Lynch, Research Division - Research Analyst*

Just have a few. Rob, on the spin, I get the operating margin benefit to Merck longer term, but did I hear you right that op margins could be lower this year in post-spin initially? And then with freed up capital, does the spin effect where you guys have previously discussed on the moderation of R&D investments looking to 2021, 2022?

And then, Frank, real quick, can you talk about the growth strategy in China for IO at this point with the NRDL decision in first line lung. I know you guys just got approval in this indication in November.

Robert M. Davis - *Merck & Co., Inc. - Executive VP of Global Services & CFO*

Geoff, thanks for the question.

So on your question about operating margin. If you look at what NewCo is within Merck today is about 45%. So it's obviously higher than Merck's operating margin. So it will be initially nominally dilutive when we pull it out in the first year. But importantly, because of the fact we are getting the operating efficiencies starting even in the first year of \$500 million and then growing with an additional \$500 million in year 2, another \$500 million year 3, so cumulative \$1.5 billion, that offsets a lot of that dilution. And so net, when you look at it, it's only about 1 percentage point of dilution to our op margin in the first year. And then very quickly, you're going to see our operating margins continue to grow. And by the time we get to over 40% by 2024, we will be at a rate higher than we would have achieved as the combined company largely as a result of that \$1.5 billion operating efficiency.

And so then that was actually the first question. The second one was what's happening with, I think, R&D as we look at -- going forward.

So we have never been capital constrained in what we're doing in R&D. What's driving the inflection point we've talked about, which is the slowdown of growth in R&D in 2021 as a percent of sales, it's still going to grow. It's going to grow. It's just going to grow slower than sales in 2021. That inflection point is driven more by where we see the clinical programs at this time. If we find opportunities to invest, and I'm confident, given the productivity that we've seen from the last -- this far that they very well might do that. We will obviously increase our investment as those opportunities present themselves. But as of right now, our expectation is that inflection point continues to happen in 2021.

Peter Dannenbaum - *Merck & Co., Inc. - VP of IR*

And Frank?

Franklin K. Clyburn - *Merck & Co., Inc. - Chief Commercial Officer & Executive VP*

Geoff, in your question on China, firstly I wanted to make sure that we do mention that our primary focus is on ensuring the safety of our employees' families and supporting the people of China. I think that's on all of our minds, and also the continuity of supply of our human health medicines and vaccines and products. And we're going to have to see how China evolves. We'll likely see some impact in Q1. Too early to quantify.

As far as your specific question on I-O, our overall strategy, as we've discussed, in particular as we roll out in the self-pay market, we still feel very confident on our position. We are still the only I-O therapy that's approved in non-small cell lung cancer. We recently got approval for KEYNOTE-407 in the squamous cell carcinoma population, and we feel as though we have a very significant opportunity in the self-pay market. And we've also adjusted our patient assistance programs in China to increase the affordability for patients that we're trying to provide access to as we move forward. So we feel confident going forward in our growth prospects for KEYTRUDA in China.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Operator

Next one is Seamus Fernandez of Guggenheim.

Seamus Christopher Fernandez - *Guggenheim Securities, LLC, Research Division - Senior Analyst of Global Pharmaceuticals*

So maybe just a follow-up on one of Steve's questions. The concentration of the business -- Merck's business to KEYTRUDA going forward. Can you just talk a little bit about the competitive pressure points that could emerge going forward? You've talked a little bit about China, but there also are potential Chinese assets that could be introduced into the U.S. following successful lung cancer clinical programs. Just trying to get a better sense of the growth opportunity for KEYTRUDA and where you see potential pressure points. And if you could also comment on some of the administration's efforts around international pricing. Again, a potential risk point for KEYTRUDA. That would be helpful.

And then just as a follow-up on -- for Roger. Roger, how quickly -- the company emphasized a lot of vaccines, opportunities for the business going forward. But most of them were Phase I. How quickly could we see some of those programs advancing and potentially coming to market? And maybe you could just tell us which 1 or 2 you're most excited to see in the near term.

Peter Dannenbaum - *Merck & Co., Inc. - VP of IR*

Great, thanks. So first, Frank, kind of the performance and outlook for KEYTRUDA.

Franklin K. Clyburn - *Merck & Co., Inc. - Chief Commercial Officer & Executive VP*

Yes, so on KEYTRUDA, as far as -- if we look back at 2019, we're, one, very pleased with our growth of 58%, excluding exchange, and almost \$4 billion and eclipsing \$11 billion in sales. We feel very well positioned, as we've been saying, with regards to KEYTRUDA, not only with regards to our significant penetration in non-small cell lung cancer within the U.S., but also a significant impact that we're having for patients with renal cell carcinoma, adjuvant melanoma, head and neck, as you heard Roger mention, our recent approval in non-muscle invasive bladder cancer.

So the breadth of our indications and the strength of our data gives us a lot of confidence to continue to grow, in particular, not only in the U.S., but ex-U.S., and especially as we roll out our broader indications in non-small cell lung cancer. And we're now reimbursed in Europe in all markets for lung, which I see is an important aspect of our growth in 2020.

The other thing I would add on the concentration piece, too, I think we tried to highlight that it's not just about KEYTRUDA, it's Lynparza, it's Lenvima, it's our pipeline in oncology that we've discussed. We also feel very good about our vaccine performance this year. GARDASIL this year grew 21% as well as our hospital and specialty products. We continue to see good growth with Bridion. So from a concentration perspective, we feel very confident on the portfolio not only KEYTRUDA but the breadth of opportunities that we have going forward.

Peter Dannenbaum - *Merck & Co., Inc. - VP of IR*

Great. Ken, on pricing?

Kenneth C. Frazier - *Merck & Co., Inc. - Chairman, President & CEO*

Okay. So on IPI question, specifically, we understand the administration's concern that certain countries don't pay their fair share of the cost of innovation. And we do keep continuing to make the point that incorporating additional price controls is not the solution to the problem. We continue to work with the administration, the Congress and other stakeholders to provide a prospectus. I think patient groups are also providing very strong prospectus on these issues as it relates to that.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

But if you take a step back and think about what we announced today, the reason why we're taking these kinds of proactive steps now is because we want to make sure that we position the company for long-term growth and viability in the future environment. That's about being much more focused on innovation, and it's about driving efficiency within our operating model. So this is about staying ahead of the curve rather than waiting until something happens in the pricing environment that we have to react to.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Right. And Roger, on vaccines?

Roger M. Perlmutter - Merck Research Laboratories - President

Right. Seamus, thanks for the question. On vaccines, I mean first of all, as you recognize, we have an enormously large program in (inaudible) conjugate vaccines to be a more meaningful program having 15 Phase III studies that are rolling out over the next 18, 24 months. We're going to see a lot of those studies coming this year, in fact, and so you'll be hearing a lot of data from those studies, which will often lead to permit filing. So that's a very near-term opportunity.

We have a lot of enthusiasm about our dengue virus vaccine. That vaccine incidentally is -- we are collaborating with colleagues at Butantan, where they have a registration-enabling study ongoing, and that study will deliver results at some point. So that's pretty exciting as well.

In addition, of course, we have our CMV vaccine. We have a lot of interesting things going on in respiratory syncytial virus. And those programs are actually fairly advanced. So things are moving along quite well.

I can't fail to mention the fact that the demand for GARDASIL, GARDASIL 9, remains enormous and that we have invested a huge amount of capital together with our manufacturing colleagues in building the additional capabilities to meet that demand. And that will be rolling out in not too long a time, and it will be very important, obviously, for the company.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Great. We have several more questioners in queue. We're going to have a hard stop at 9:15, but we're willing to keep going.

Operator

Next one is from Daina Graybosch of SVB Leerink.

Daina Michelle Graybosch - SVB Leerink LLC, Research Division - MD & Senior Research Analyst

Two of them. First on NewCo. What do you see as a long-term relationship between NewCo and Merck? And then the next question for Roger. As you reflect on all the internal and external immuno-oncology data that came out in 2019, what novel mechanisms are you most excited about to add on top of KEYTRUDA to provide further benefit for patients?

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Well, in terms of a long-term relationship, that's to be decided as both companies look to their future and decide how they want to make sure that they optimize their best opportunities. So I can't say anything other than what we've announced today in terms of the products that are going over. But obviously, what I would say about NewCo that makes me excited is I think they will have many of the same standards and values that Merck has going forward.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Great. Roger?

Roger M. Perlmutter - Merck Research Laboratories - President

Yes. Thanks for the question, Daina. The -- in many respects, the things we're most excited about, you can tell by looking at the things that we're investing in. You can see that quite remarkably, the Lenvima, and as it's demonstrated in the endometrio cancer registration combination with KEYTRUDA most recently, but we've also seen really spectacular data in renal cell carcinoma, we presented those Phase II data, and we have ongoing Phase III data demonstrate that the protein tyrosine kinase inhibitors with special characteristics can combine very effectively with KEYTRUDA.

And we also have data which we presented in combination with Lynparza that are very impressive. And we have this very large set of new molecules, which some -- which we've referred to already that include antibodies directed against other potential checkpoints, like three TIGIT and a whole bunch of other things. And there really are quite provocative data available now already in those settings. We're hopeful that we'll begin to tease out, help us to use those things in combination. So lots of exciting things going on.

Operator

Next question is from David Risinger of Morgan Stanley.

David Reed Risinger - Morgan Stanley, Research Division - MD in Equity Research and United States Pharmaceuticals Analyst

Yes. Great. So I have a few questions. First, could you provide an update on where GARDASIL manufacturing supply stands and the GARDASIL revenue growth prospects in 2020? And then Roger, could you discuss potential proof-of-concept results for Merck's early to mid-stage pipeline to watch in 2020? And in addition, could you provide a framework for the time line for the second pneumococcal vaccine that Merck is developing for infants which would be added to V-114 to offer broader coverage longer term?

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Great. I think the first question is on GARDASIL supply and outlook. So Frank?

Franklin K. Clyburn - Merck & Co., Inc. - Chief Commercial Officer & Executive VP

Yes, Dave. So with regards to GARDASIL, we do continue to see very strong demand around the world. Currently, our supply is not able to meet that demand. As we mentioned, we saw growth of 21% this year. The growth, we do believe will continue in 2020. Will slightly tempered from the rates you've seen in 2019 and 2018. And we're focused with our manufacturing colleagues to do everything we can with contract manufacturers in the near-term to try to help our supply. And then ultimately, in 2023, as we've been mentioning, we'll be bringing on 2 new bulk manufacturing facilities that will really allow us to ramp our supply up to meet the strong demand that we're seeing globally.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Roger on the...

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Roger M. Perlmutter - Merck Research Laboratories - President

David, on the early- to mid-stage pipeline, well, we've already discussed in a lot of programs in oncology in combination with KEYTRUDA, but we have a lot of other areas as well that are moving forward.

Of course, building on the results of Vericiguat in heart failure, the Phase III data which will be presented in the results for the near future, which are quite interesting, we actually have a lot of other interesting things going on in soluble linoleic cyclase activators. So that's an important area for us and something that we expect to see quite a lot of data on. And we're going to be seeing a lot of it on, of course, our vaccine programs that I mentioned just a few minutes ago. So there will be a lot of data coming forward in 2020.

And speaking of vaccines, you mentioned the additional vaccine program.

I think you were referring to V-117 in the pediatric context, which is not an add-on, but a separate and independent vaccine all by itself. And that program, which we've just given a name to, we'll be moving forward shortly.

I'd just reemphasize that the V-114 program is very far advanced with lots of Phase III data coming forward this year and next year and will be a leading program in both the adult and pediatric settings. Ultimately, V-116 and V-117 will provide further coverage. So more to discuss there.

Next one is from Terence Flynn of Goldman Sachs.

Terence C. Flynn - Goldman Sachs Group Inc., Research Division - MD

Just maybe a couple on the spin as well. Does this change at all how you approach M&A and business development from a timing perspective? Just wondering if we shouldn't expect any sizable bolt-ons until after the spin is completed. And then are there any tax rate implications that we need to consider?

And then any update on the path forward for KEYTRUDA in neoadjuvant breast cancer regarding discussions with FDA. And then when can we expect your Phase III front line data in metastatic triple-negative breast? And is that important in terms of the conversations with regulators?

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Okay, I think we'll start with Ken on the timing of BD and our strategy

around that.

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

I expect to see no change in our approach to BD from a timing or strategy standpoint as a result of the spin. We still see the need to augment our pipeline going forward. We see opportunities, and we're going to be very focused on that.

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

Yes. And I would add to that point, and then I'll address the tax question. As I said in the prepared remarks, but it's worth reemphasizing, we will have ample capital to do anything we want to do. So this also in no way constrains us from a capital perspective. So with regards to the tax rate, generally speaking, you should not see any meaningful change to our tax rate as a result of this transaction.

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Right. And in terms -- with respect to neoadjuvant breast cancer, triple-negative breast cancer, of course the 522 data we presented at ESMO, the effective neoadjuvants in that setting in terms of pathologic complete response is very clear, and we also had very provocative event-free survival data that we discussed. There's more data that will be coming forward in that, and we are -- we continue to have conversations with regulatory agencies about that study.

And you're right, as we have an ongoing Phase III study in triple-negative breast cancer, 355, that could yield data in principle that would have an impact on thinking with regard to the adjuvant, neoadjuvant study. But of course, we have to wait to see the data. So that should be coming forward sometime relatively soon as well. It's a (inaudible), of course, so I don't know exactly when.

Last one is Mara Goldstein from Mizuho.

Mara Goldstein - Mizuho Securities USA LLC, Research Division - MD of Equity Research Department

Just a quick question on NewCo spin-off and the targets around achieving an R&D organization and how should we think about that from a metric perspective.

And then just quickly on China. I know we've covered it, but Merck has spoken to China as a component of growth strategy on a go-forward basis. And understanding that KEYTRUDA has been a part of that, but Merck has other portfolio of products in China, so I'm wondering how much of NewCo's business is responsible for the growth in that region and how RemainCo will be able to advance its growth initiative in the absence of NRDL listing which didn't occur as expected.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

So the first question, I believe, was on R&D metrics around NewCo. Rob or Kevin, I don't think we have much to add there at this point.

Robert M. Davis - Merck & Co., Inc. - Executive VP of Global Services & CFO

No. And clearly, I will just say that as we think about the 35% operating margin growing over time, that contemplates investments in research and development in the business, and so it is fully covered. There is an assumption that they will be doing R&D moving forward. And we feel like it's been adequately covered in the way we've resourced the investments in the business. And I don't know if Kevin wanted to add anything about the R&D other than he what said earlier.

Kevin Ali

I think just to recap what we said earlier that over time we'll build more of the research and development capabilities as we start to do meaningful business development and start to see opportunities to start to do development.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Great. And the second question?

FEBRUARY 05, 2020 / 1:00PM, MRK - Q4 2019 Merck & Co Inc Earnings Call

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

China growth.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

China growth, yes.

Franklin K. Clyburn - Merck & Co., Inc. - Chief Commercial Officer & Executive VP

This is Frank. With China, as we've discussed, we're very pleased with the growth this year of 58%. And our growth, to your point, is very broad-based. It's KEYTRUDA's, it's GARDASIL, it's Lynparza, it's Lenvima, it's our innovative portfolio has done very well. JANUVIA is on NRDL. ZEPATIER was recently placed on NRDL. So we see our growth going forward in China, and we see significant opportunities. Obviously, as I mentioned, we're all thinking about the coronavirus. So we'll have to see how that unfolds, but nothing has changed in the mid to long term about our opportunities in China.

Kenneth C. Frazier - Merck & Co., Inc. - Chairman, President & CEO

Great. Okay. Thank you all for joining us today.

As I said in our third quarter call, we're confident but we're not complacent, and the separation is evidence of just that. We're convinced that the decision is the right one for the business, and we believe that now is the right time to capitalize on a position of strength to secure an even stronger future for Merck.

As a more focused research and tested biopharmaceutical company, we'll be better positioned to carry out our mission of inventing to save and improve lives and drive lasting value for the patients and shareholders we exist to serve. Thank you very much.

Peter Dannenbaum - Merck & Co., Inc. - VP of IR

Thank you all.
