

Baker Hughes Awarded Offshore Production Enhancement and Stimulation Services

Contract by bp

9/4/2026

- Significant contract supports new well development and production enhancement across bp's UK North Sea operations
- Advanced modular stimulation solution designed to support efficient well completion, operational reliability and enhanced reservoir recovery

HOUSTON and LONDON, Sept. 04, 2026 (GLOBE NEWSWIRE) -- Baker Hughes (NASDAQ: BKR), an energy technology company, announced Friday a significant award from bp to provide offshore stimulation services across the company's UK North Sea operations. The award supports both new well development and enhanced recovery from mature fields.

Under the agreement, Baker Hughes will deploy a vessel-based stimulation solution featuring its proven StimFORCE™ modular stimulation package to support well completions and production enhancement activities. Supported by a UK operating base and an established local supply chain network, the solution is designed to enhance operational reliability, minimize non-productive time and optimize recovery. The dedicated vessel solution provides both schedule and operational flexibility, enabling stimulation activities to be executed efficiently.

"By combining our vessel-based stimulation expertise, advanced intervention technologies and production optimization capabilities, we are well positioned to help bp enhance reservoir performance, increase operational flexibility and unlock additional value from both new and mature fields across its North Sea portfolio," said Baker Hughes Executive Vice President of Oilfield Services & Equipment Amerino Gatti.

Baker Hughes has a long-standing presence in the UK, helping offshore operators optimize reservoir performance across the well lifecycle through advanced drilling, completions and intervention technologies.
