Everforth ECS Secures NGA Contract Extension With Potential Value Exceeding $200M, Advancing Operational GEOINT Capabilities

2026-11-03

Company will continue helping NGA move geospatial intelligence technologies from development into operational use through software engineering, interoperability-integration, training, and adoption support

FAIRFAX, Va.--(BUSINESS WIRE)-- **Everforth™ ECS®**, a trusted mission operations partner for defense, intelligence, and federal civilian agencies, and the Federal Government Segment of **Everforth, Inc.** (NYSE: EFOR), today announced it has secured an up to two-year prime contract extension with the National Geospatial-Intelligence Agency (NGA). The extension has a potential value of more than $200 million.

Under this extension, Everforth ECS will continue its longstanding support of geospatial intelligence (GEOINT) artificial intelligence (AI)/super intelligence (SI) development, interoperability, federation, and operational adoption. The company's work will help NGA deliver trusted intelligence faster and strengthen decision advantage for analysts, warfighters, and national security leaders.

As both a combat support agency and a member of the U.S. Intelligence Community, NGA provides timely, relevant, accurate, and actionable GEOINT in support of national security and defense missions.

Everforth ECS will continue providing program management, **software engineering**, systems integration and interoperability, capability federation, training and tradecraft, and user adoption support. Together, these capabilities support the rapid development and delivery of **GEOINT AI/SI** and help transition **advanced AI/SI technologies** into operational use across the GEOINT community.

"The value of GEOINT SI is what it enables analysts, decision makers, and warfighters to do: get the right intelligence faster and act with greater confidence in complex, rapidly changing environments," said **Donnie Scott**, president of Everforth ECS. "Our team has earned NGA's trust by turning advanced technology into operational capability. With this extension, we will continue bringing together mission understanding, engineering, interoperability, and SI to accelerate adoption and deliver better mission outcomes."

“Moving advanced intelligence capabilities from development into mission use takes more than technology. It requires systems integration, interoperability, training, and close partnership with users,” said **Sydney Gillen**, head of the Intelligence business unit at Everforth ECS. “Our people understand that because they have spent years working alongside NGA and the GEOINT community. We are proud to continue helping make these capabilities interoperable, usable, and operationally relevant.”

About Everforth ECS

Everforth ECS, the Federal Government Segment of Everforth, is a trusted mission operations partner helping government agencies deliver measurable outcomes through advanced technology solutions, including AI, cybersecurity, digital engineering, and enterprise modernization. By bringing together deep mission expertise, proven processes, and the right technologies, Everforth ECS helps customers accelerate decision making, strengthen resilience, and modernize the systems that power the government’s most critical missions.
