Everforth Showcases Proven Results from AI-Powered Rapid Discovery Tool

2026-07-14

Accelerator reduces discovery timelines by 25% and delivers a more complete and reliable requirements baseline compared to traditional manual discovery approaches

RICHMOND, Va.--(BUSINESS WIRE)-- Everforth, Inc. (NYSE: EFOR), a leading technology and digital engineering company, announced today the recent success of the Company’s Rapid Discovery Tool, a proprietary AI-powered accelerator. RDT is part of Everforth's growing portfolio of proprietary accelerators that help clients accelerate delivery, improve quality, and achieve measurable business outcomes across application modernization and digital transformation initiatives.

As organizations accelerate application modernization, cloud migration, and AI transformation initiatives, understanding the true complexity of legacy systems remains one of the biggest barriers to success. Everforth's Rapid Discovery Tool (RDT) helps organizations uncover hidden business logic, identify critical dependencies, and create a clearer understanding of how their systems operate.

Traditional discovery approaches often depend on stakeholder interviews, outdated documentation, and institutional knowledge that may no longer reflect current system behavior. The RDT complements these efforts by analyzing source code and system interactions to extract business rules, document workflows, map integrations, and generate key discovery artifacts, providing a more complete and objective view of the application landscape.

"A clear understanding of legacy systems is essential to successful modernization," said Jerry King, Managing Director of Application Engineering and Services, Everforth Apex Systems. "The Rapid Discovery Tool helps clients move beyond assumptions and incomplete documentation by identifying the logic, processes, and dependencies that underpin their business operations. By combining our proprietary accelerator with Everforth's engineering expertise, we help clients create a trusted foundation for modernization while reducing risk, accelerating delivery, and improving outcomes."

RDT Delivers Measurable Impact for Global Hospitality Client

The Everforth Commercial team recently demonstrated the impact of the RDT as part of a modernization initiative for a global hospitality organization. Faced with decades of business logic spread across reservation, loyalty, and property management systems, the client needed a reliable understanding of its existing environment before moving forward with its transformation efforts. Using the RDT, Everforth analyzed the client's technology landscape, automatically extracting business rules, workflows, and integration points while uncovering hidden dependencies that traditional discovery methods may have missed.

The engagement reduced discovery timelines by 25% while delivering a more complete and reliable requirements baseline than traditional manual discovery approaches. The resulting documentation and system intelligence provided stakeholders with a validated foundation for modernization planning, implementation readiness, testing, and migration activities.

RDT is one of several proprietary accelerators within Everforth's innovation portfolio, which is designed to help clients solve complex technology challenges faster and more efficiently. Across application modernization, cloud migration, AI-enabled engineering, and digital transformation initiatives, Everforth's accelerators combine proprietary IP, automation, and engineering expertise to deliver differentiated outcomes and measurable business value.
