

NEWS RELEASE

York Space Systems First to Deploy Second Layer of T1TL Transport System, Confirms Health of 21 Additional Satellites on Orbit Within Hours

2026-07-20

York's second production lot launch brings its total T1TL satellites on orbit to 42

DENVER--(BUSINESS WIRE)-- **York Space Systems** (York) (NYSE: YSS), a leading, US-based national defense and commercial prime providing a comprehensive suite of mission-enabling solutions, has made contact and confirmed the healthy status of all 21 satellites in less than five hours following launch vehicle separation. The system was launched on July 16, from Space Launch Complex 4 East at Vandenberg Space Force Base, CA aboard a dedicated Falcon 9 in support of the Space Development Agency's (SDA) Proliferated Warfighter Space Architecture (PWSA) Tranche 1 Transport Layer (T1TL) mission. With this deployment, York is the first T1TL performer to deploy their second plane for SDA, delivering 42 satellites on orbit.

21 York-built satellites launched July 16 from Space Launch Complex 4 East at Vandenberg Space Force Base aboard a dedicated Falcon 9 in support of the Space Development Agency's (SDA) Proliferated Warfighter Space Architecture (PWSA) Tranche 1 Transport Layer (T1TL) mission.

Deploying and confirming the health of all satellites within hours of launch continues to demonstrate the scalability and reliability of York's space vehicle

production and operations model, supporting U.S. Government efforts to ensure resilient, low-latency satellite communications are available to U.S. and allied warfighters. A global network of **Atlas** Space Operations ground stations and the company's Freedom Ground Software are supporting the mission and early orbit checkout.

"Rapidly confirming health across 21 satellites in a second consecutive T1TL launch is proof of York's mature high-rate production and disciplined mission operations capabilities at scale," said Melanie Preisser, EVP and GM of York. "This T1TL deployment further reinforces York's continued role in enabling the DoD's vision for a proliferated architecture that ensures tactical assured communications resilience for the warfighter."

York continues to deliver operational capability at scale for a growing range of customers and mission sets. That consistent execution, across national security, civil, and commercial programs, positions York to continue capitalizing on the expanding portfolio of opportunities centered on proliferated space architectures.

"York remains committed to delivering the space-based capabilities that underpin U.S. national security," added Preisser. "As geopolitical risks grow, so does the warfighter's need for proliferated space capabilities on orbit, and York is proud to help meet that need."

York has now placed 55 spacecraft in orbit. This launch marks the company's eighth launch overall. The T1TL system is York's third constellation, and fifth mission being operated simultaneously from their dedicated Mission Operation Centers. The Transport Network will provide a resilient tactical communication system for the warfighter and adds to the portfolio of capabilities demonstrated by York, which include Space Situational Awareness (SSA), Air Moving Target Indicator (AMTI)/Ground Moving Target Indicator (GMTI), Data Network, Custody, Targeting, and numerous classified missions.

About York Space Systems

York Space Systems (NYSE: YSS) is a leading, U.S.-based national defense and commercial prime providing a comprehensive suite of mission-critical solutions for national security, government, and commercial customers. York is one of the only space and defense primes with proprietary hardware and software capabilities designed to address customers' complex mission requirements across the critical elements of the entire space ecosystem throughout the mission lifecycle. York is purpose built to address evolving national security space challenges and to adapt to the ongoing shift in the U.S. government's mission needs and procurement processes.

Forward-Looking Statements

This press release contains "forward-looking statements" within the meaning of, and we intend such forward-looking statements to be covered by, the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements are inherently subject to risks and uncertainties, some of which cannot be predicted or quantified. In some cases, you can identify forward-looking statements by terminology such as "anticipate," "believe," "could," "emerging," "expand," "expect," "feasibility," "intend," "may," "objective," "plan," "potential," "should," "will," "would," or the negative of these terms or other comparable terminology. In particular,

statements about the use and execution of our production lot, the health of our spacecraft, increasing demand, and our expectations, beliefs, plans, strategies, objectives, prospects, assumptions, or future events or performance contained in this press release are forward-looking statements.

Factors that could cause actual results to differ materially from those expressed or implied by the forward-looking statements include: any failure of our spacecraft systems and related software to operate as intended, resulting in claims for product failures, schedule delays or other problems with existing or new products; cost overruns on our contracts, including before final receipt of a contract; significant competition in the global space and satellite market; our revenue, results of operations and reputation may be negatively impacted if our products contain defects or fail to operate in the expected manner; our failure to establish and maintain important relationships with government agencies and prime contractors; the scarcity or unavailability of critical components used to manufacture our products or used in our development programs; disruptions in U.S. government operations and funding and budgetary priorities of the U.S. government; the inability to comply with any of our contracts or meet eligibility requirements to obtain certain government contracts; and the other factors set forth in our filings with the Securities and Exchange Commission. You should not place undue reliance on these forward-looking statements, which speak only as of the date stated, or if no date is stated, as of the date of this press release and the related conference call. Actual results may vary from the estimates provided. We undertake no intent or obligation to publicly update or revise any of the estimates and other forward-looking statements made in this press release, whether as a result of new information, future events or otherwise, except as required by law.
