

Information Technology That Supports America's Defense In A Networked World

CACI

IT Solutions for America's Defense in a **Networked World**

A billion people worldwide are now connected by networked technology—and they're just the beginning. In the networked economy, the common currency is information. And as we all learned since the terrible events of September 11, 2001, the networked world enables entirely new ways of waging war and securing peace.

At CACI, we understand that when everything works together, the results can be extraordinarily powerful.

We provide the IT and network solutions needed to prevail in today's new era of defense, intelligence, and e-government. From systems integration and managed network solutions to knowledge management, engineering, simulation, and information assurance, we deliver the IT applications and infrastructures our federal customers use to improve communications and collaboration, secure the integrity of information systems and networks, enhance data collection and analysis, and increase efficiency and mission effectiveness. For 40 years, CACI has fulfilled this role, advancing our work with each leap forward in technology to bolster performance for our government and commercial customers while building value for our shareholders. Our solutions help lead the transformation of defense and intelligence, assure homeland security, enhance decision-making and help government to work smarter, faster and more responsively.

People who care . . . using incredible technology . . . to implement powerful solutions. That's what makes an outstanding performer, a company that achieves results and attains profitable growth. That's what makes CACI stand out. We use information technology to create solutions in the 21st century networked world.

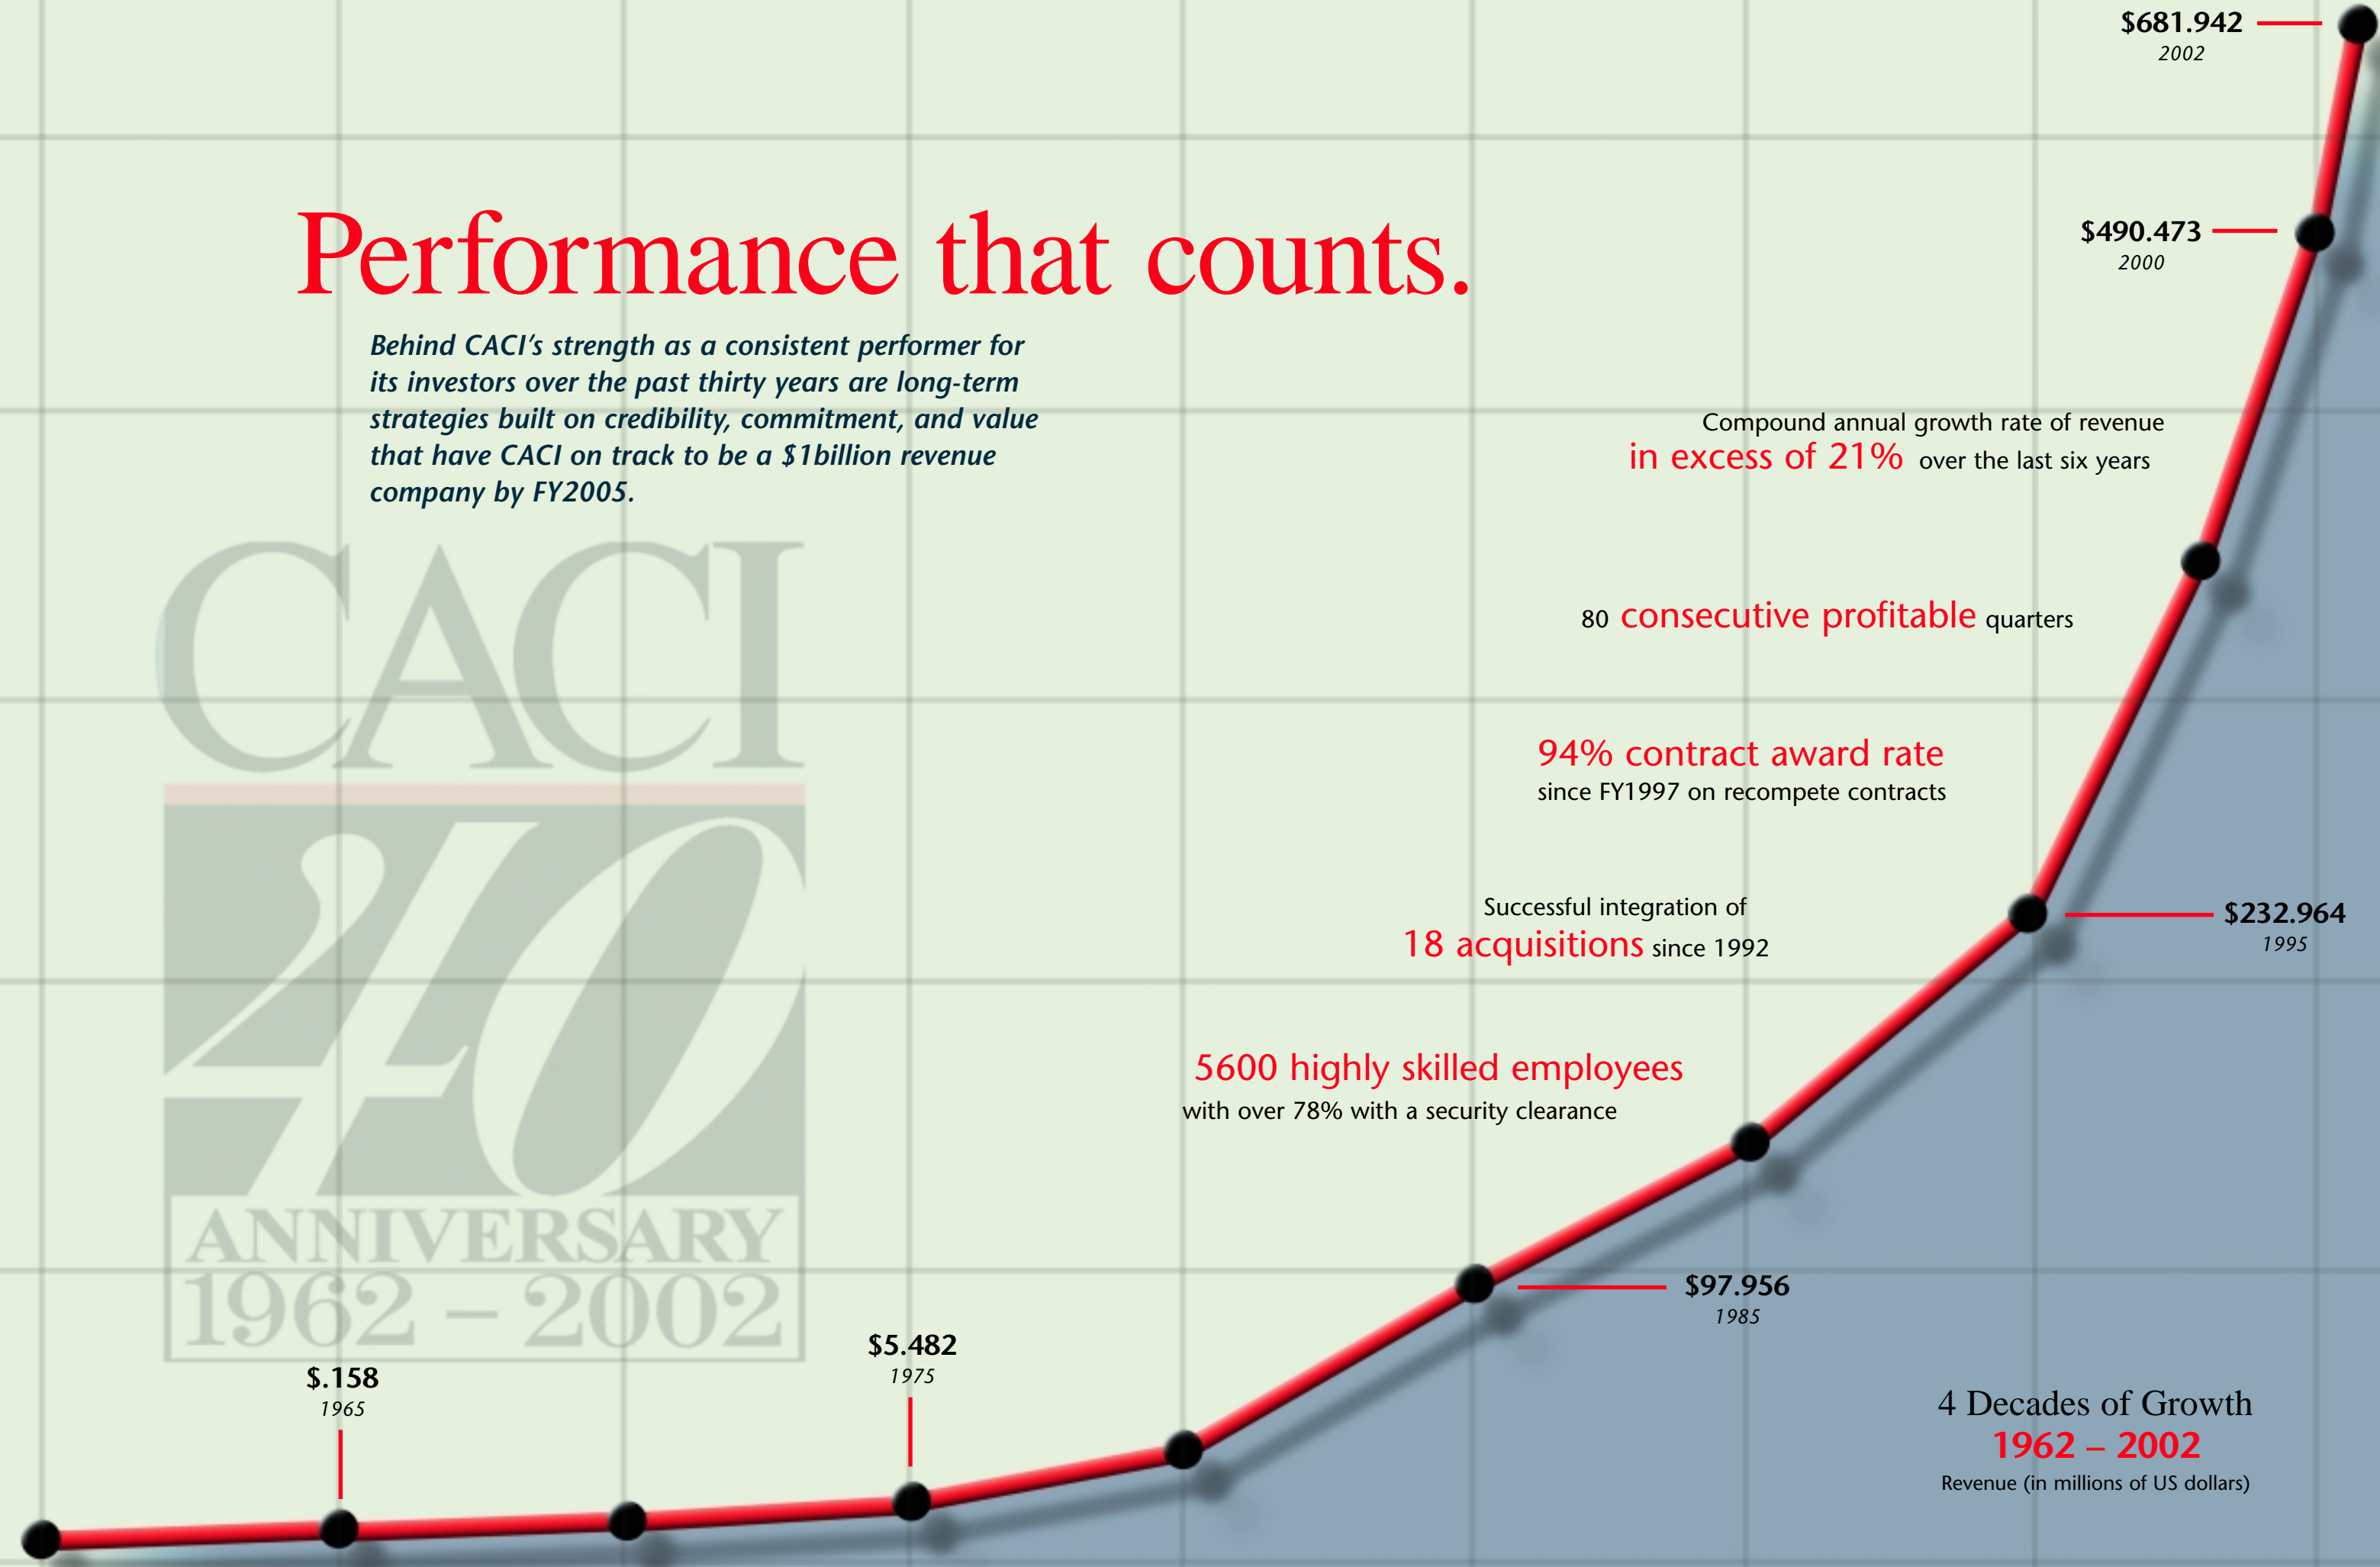

CACI is listed on the NYSE under the symbol "CAI" and can be found on the web at www.caci.com. It is a member of the Russell 2000 and S&P SmallCap 600 indices.

Performance that counts.

Behind CACI's strength as a consistent performer for its investors over the past thirty years are long-term strategies built on credibility, commitment, and value that have CACI on track to be a \$1 billion revenue company by FY2005.

**Based on Income from Continuing Operations

To My Fellow Shareholders

Our fortieth year of operations was one of the most eventful, successful, and profitable in the history of CACI.

It was a year in which we exceeded our financial goals, producing record revenue, income from continuing operations, and earnings per diluted share. It was a year in which we strengthened the company’s position as a primary solutions provider to the Departments of Defense and Justice and the intelligence community. And, it was a year in which we continued to enhance shareholder value. In short, we believe our performance this year demonstrates the strength and strategic diversity of our operations and validates our business strategy. Several of the significant achievements of this fiscal year can be seen at the bottom of the first two pages of this letter.

Another Year of Record Financial Performance

For FY2002, CACI’s revenue grew to \$682 million, up 22 percent over FY 2001’s revenue of \$558 million. Operating income was a record \$53 million, up 42 percent over last year’s record \$37 million. Income from continuing operations was \$32 million, or \$1.24 per diluted share, up 54 percent over the \$21 million, or \$0.90 per diluted share, in FY2001. Our cash flow from operations was \$39 million, up 24 percent over last year’s \$31 million. Our overall cash flow, as measured by earnings before interest, taxes, depreciation, and amortization (EBITDA) was \$65 million, or 9.6 percent of revenue, up 28 percent over the \$51 million, or 9.1 percent of revenue, reported last year. As a result of our successful secondary offering in which we raised net capital of \$162 million, our shareholders’ equity at year-end was over \$367 million. And our borrowing capacity is now \$185 million as a result of our new five-year credit facility. Our backlog at fiscal year-end was the highest we have ever reported: \$1.9 billion, up from \$1.1 billion a year earlier. At the end of FY2002, CACI’s fundamentals are extremely sound and provide us with a solid foundation for continuing our profitable growth as we move into FY2003.

A New Defense Era and Turmoil in Our Domestic Financial Markets

Our progress this year was made largely in the new defense era of the post-September 11, 2001, world. And, we delivered record results in an economy bordering on recession in which the capital markets have been shaken by a stream of corporate scandals.

Information and communications technology is powering the ongoing transformation of our military to project power as well as the United States Federal Government to deliver services. It is becoming the new frontline for America’s homeland security. The early efforts to effect the transformation of our government in this new defense era resulted in increased tasking by our domestic customers for our services and solutions. All of our major service offerings experienced significant growth: systems integration, up 24 percent; managed network services, up 37 percent;

CACI achieved record earnings and revenue in FY2002 as all the major areas of our company experienced solid growth.

engineering services, up 16 percent; and knowledge management, up 15 percent. We won all of our major contracts that were recompeted, including our premier Mega 2 contract to provide litigation support services for the Department of Justice, our Global Solutions contract to support the communications network of the Defense Information Systems Agency, and the software and systems integration support contract for the Naval Tactical Command Support System. During FY2002, we announced over \$1.5 billion in contract awards from our federal customers. And we completed our 18th successful acquisition, expanding our managed network and enterprise resource planning capabilities and adding new customers through the acquisition of Digital Systems International Corporation (DSIC). In all, revenue from the federal government grew 30 percent this past fiscal year.

2002 CACI Milestones

REVENUE	CONTRACTS	BACKLOG	ACQUISITIONS	CAPITAL	CREDIT LINE	DIVIDEND	EARNINGS	HONORS	STOCK LISTING	ETHICS	PERFORMANCE
Revenue from Federal Government grew 30% in 2002	CACI won contract awards of over \$1.5 billion from federal customers	CACI ended the year with a backlog of \$1.9 billion, the highest in our history	CACI completed its 18th successful acquisition, Digital Systems International Corporation, which further enhanced our capabilities and customer base	Increased net capitalization by \$161.5 million raised through a successful secondary offering which strengthened our balance sheet	Borrowing capacity expanded by \$60 million to a five year \$185 credit facility	CACI issued a one hundred percent stock dividend for shareholders having the effect of a two-for-one stock split	Each quarter recorded record earnings resulting in record annual earnings of \$681.9 million	CACI honored by the Newcomen Society for making positive contributions to the global marketplace	On Friday, August 16th, CACI International Inc Class A Common Stock began trading on the New York Stock Exchange (NYSE) under the new ticker symbol "CAI"	Ethics in Business award presented by HR Leadership Awards of Greater Washington in honor of Dr. London	CACI honored by Association for Corporate Growth for sustained financial performance
											

Our United Kingdom (UK) operations, however, were affected by the continued weakness in the commercial information technology market of that country. Despite a 14 percent decline in revenue, they remain very profitable, contributing to our bottom line by producing pre-tax margins of 13 percent during FY2002. Overall, the higher level of activity in CACI's operations produced internal growth of 11 percent, closing in on our objective of being able to grow our company 12 to 15 percent internally on an annual basis.

While we were growing our operations this past fiscal year, we saw the effects of those whose standards of conduct have threatened the integrity of our financial markets and the business community as a whole. New laws are now in place and new regulations are being formulated in an attempt to legislate acceptable ethical behavior. I can assure you that at CACI we have long been dedicated to conducting all aspects of our business in accordance with high standards of ethics and

Our secondary offering provided new capital that strengthened our balance sheet as well as our successful acquisition program, which is a key component of our growth strategy.

accountability. Our published Operational Philosophy, that has been part of our culture for years, places "integrity and honesty above all else" and states that "we are fully accountable for what we do." Our Code of Ethics and Business Conduct Standards, that every CACI officer and employee is required to sign annually, delineates our "uncompromising commitment to compliance with the laws and regulations of the jurisdictions where we conduct business." These standards, as much as our capability to meet our clients' requirements, have contributed to our accomplishments this past year and throughout our forty years of operations.

In addition, we support the new corporate governance listing standards approved by the New York Stock Exchange, where we began trading under the symbol "CAI" on August 16, 2002. We agree with these new rules that will "allow shareholders to more easily and efficiently monitor the performance of companies and directors to reduce instances of lax and unethical behavior," and we salute the New York Stock Exchange's leadership in restoring investor confidence in corporate America.

CACI's Growth and National Priorities

As we pointed out in this letter last year, CACI is committed to supporting the implementation of a national strategy to protect our nation from terrorist attacks. Over the past twelve months we have seen that strategy unfold resulting in the proposed establishment of a new Department of Homeland Security and the release of the first National Strategy for Homeland Security. In the government's Fiscal Year 2002, \$29 billion was authorized for homeland security; \$38 billion is budgeted for Fiscal Year 2003. Improved intelligence and threat warning is one of the critical mission areas of the national strategy. As is pointed out in that strategy, however, better information sharing and systems are needed to achieve this mission. Numerous key databases need to be connected to allow our government to get the most value from the available information. We have already committed resources to homeland security and are prepared to offer all possible support to the government in this and other areas. We believe our strengths are an excellent fit with the new national defense priority that is dependent upon widespread, secure, sharing and communication of information.

We believe our proven expertise in managed network services, systems integration and knowledge management will be especially valuable as the new department comes together and begins to function. CACI is also positioned to respond to other systemic and infrastructure needs of our government. Among those are the need to respond to the growing crisis in human capital caused by the impending wave of government employee retirements over the next few years; the need to upgrade and improve financial systems throughout the government; and the need to protect and assure the delivery of information to the right people and places over government networks.

Our growth strategy remains the same—sustain our internal growth by maintaining our current base of business; accelerate our new business development, especially in our higher growth, higher margin service offering areas; and continue to accomplish strategic, accretive acquisitions that complement our capabilities and expand our customer base. As our record results for Fiscal Year 2002 illustrate, we are already experiencing some of the benefits of implementing our strategy: increasing profitability, higher internal growth, and a strong backlog of work.

Meeting Our Strategic Objective

From our board of directors to our highly qualified senior management team to our 5,600 dedicated employees—we value our long-standing customer relationships and appreciate the opportunity to continue to provide services to them. We appreciate the outstanding contributions of all of our employees to the success of those relationships. We also highly value the support of you, our shareholders. We firmly believe that we are in the right markets, with the right capabilities, and with the right team. We believe that we are well on our way to meeting our objective of surpassing \$1 billion in annual revenue by our Fiscal Year 2005 while continuing to enhance shareholder value.

Dr. J. P. (Jack) London
Chairman of the Board, President,
and Chief Executive Officer,
CACI International Inc

Managed Network Services

We live at a time of unprecedented international connectedness, when secure electronic borders are just as important as physical checkpoints. CACI's managed network services are key to this new era, offering consistent, reliable, and secure networks for both classified and unclassified data, and for all types of communication infrastructures.

That is why CACI is the contractor of choice for a wide range of government agencies, including the U.S. State Department's Bureau of Information Resource Management and the Defense Information Systems Agency. We build and manage networks that can reach anyone, anywhere, anytime, for seamless, secure, and trouble-free transmission of data, voice, or video around the globe.

CACI offers comprehensive capabilities in network design, engineering, procurement, implementation, management, and security. We supply the people, process, tools, and technology to support any stage of the network life cycle.

Not only do we have the expertise to develop and deploy the most sophisticated systems, we also have the commitment to quality and security that America's government and its citizens desire and deserve. We will continue to exercise this commitment to deliver high-speed, high-performance telecommunications for the secure transmission of vital data and the enhanced sharing of information for better homeland security.

Operations centers at the State Department, the Defense Information Systems Agency, and civilian agencies depend on CACI's managed network services to build and maintain networks that are consistent, flexible, and transparent.

When CACI began providing intelligence services more than 30 years ago, we quickly became a key partner to our clients. In the decades since, the intelligence game has changed dramatically, with new political threats emerging and more sophisticated technologies coming into play. As the need for intelligence has increased, CACI has done much to stay abreast with the technologies necessary to meet our clients’ evolving requirements.

Intelligence agencies turn to CACI for solutions that span the intelligence life cycle: tasking, exploitation, production, and dissemination. We provide systems engineering, program acquisition, technical support, signals analysis and training, video production, network operation, integration of prototypes, and full software services. Our clients have learned that they can rely on CACI to complete the most critical intelligence tasks, using our expertise to provide comprehensive responses within as little as 72 hours.

Under our Technical, Engineering, Fabrication, and Operations Support contract with the Army’s Communications-Electronics Command, for instance, we are a leader in C⁴ISR (command, control, communications, computers, intelligence, surveillance, reconnaissance). We provide operations analysis, research and development, quick reaction systems prototyping, responsive integration, and field service support to the warfighter. Our experience of having participated in every significant tactical intelligence system fielded over the last 20 years provides us with a competitive advantage in this critical area.

As our government increases intelligence spending to further identify and counter the diverse threats to our security, CACI will continue to provide a broad spectrum of services to the agencies and organizations within the intelligence community to assist them with their vital mission.

CACI’s C⁴ISR tactical support to U.S. Army field personnel allows remote communications with other soldiers either in the field or at headquarters using a miniature laptop computer, a collapsible antenna, and a wireless connection that operates via satellite.

Systems Integration

In an interconnected world, comprehensive systems integration isn't a choice but a requirement. CACI is unsurpassed in this essential capability, helping clients realize ongoing returns from legacy infrastructure while simultaneously reaping gains from emerging technologies.

Our certification by the Software Engineering Institute (SEI) places CACI among the elite of organizations evaluated worldwide and positions us as a prime contractor with a comprehensive array of integration solutions. Our services include modeling and simulation to help clients visualize choices in systems before investing in them, integrating disparate automated systems and networks with essential Web-enabling technologies, and developing custom scenarios to support high-level government decision-making.

CACI provides systems integration support to major civilian and defense programs through such contracts as the General Services Administration (GSA) Federal Supply Service Schedule. One of our primary roles is to integrate financial systems within and across agencies—replacing stand-alone systems with nationwide networks and ensuring the security of both the systems and their data.

For other clients, our process reengineering services streamline information sharing and other activities. With these and other systems integration solutions, CACI is well positioned to meet a broad spectrum of client needs—needs that have only become more critical as homeland security becomes an integral part of our national defense.

CACI's modeling and simulation systems for the military determine the best way to structure and deploy forces such as in the aftermath of the 9-11 attacks in New York when a Navy task force relied on CACI systems in providing air defense for the city.

The raw data that makes up today's information explosion does little good unless it can be converted to usable knowledge—usable by the right people at the right time, for the right reasons. In document-intensive fields such as criminal justice, medicine, finance, and defense, CACI ensures that information storage and retrieval is fast, efficient, and secure.

Our services span the data life cycle, from creation and storage in virtual data warehouses to accessing and retrieval based on specific criteria of authorized users. Whether the ultimate use is pursuing a judicial action, identifying a medical therapy, tracking payments on purchases or loans, or managing a military system, CACI solutions deliver.

As our federal clients, in particular, react to a changing landscape of litigation and national security concerns, CACI is ready to respond with strategic technological and process-oriented solutions. In our ongoing contract relationship with the U.S. Department of Justice (DOJ), CACI's litigation support has critically aided DOJ in winning favorable rulings with billions of dollars at stake. Currently, CACI knowledge management solutions, such as database management, imaging, and correspondence tracking, are helping DOJ manage the litigation workflow of evidentiary materials, from discovery to trial.

By helping our clients reach and retrieve the information they need from within—or without—their organization, we help increase worker productivity and overall success rates. Knowledge management is far from a "catchphrase of the day"; as our clients' knowledge requirements expand and evolve, so too will our tools for helping deliver information quickly and accurately.

CACI provides Justice Department clients with innovative document technologies that include sophisticated research systems for accurate and fast information retrieval from its law libraries.

CACI is committed to helping our government, military, intelligence, and private sector clients meet the ever-increasing need to reduce systems life cycle costs and boost productivity through the introduction of technology-based efficiencies. Our engineering services include integrated logistics support, simulation and programming, prototype development and integration, and system and software design and integration.

CACI is a key member of the Naval Sea Systems Command team charged with implementing the most ambitious Enterprise Resource Planning (ERP) initiative ever undertaken in the Department of Defense. In this role, we provide legacy systems and data migration services, software integration, and the full range of data center services for the Navy Enterprise Maintenance Automated Information System (NEMAIS). CACI's unique blend of technical and functional expertise has been pivotal in successfully replacing hundreds of legacy systems with a single enterprise-level solution.

CACI also provides systems engineering and integration to the Air Force Materiel Command Air Force Equipment Management System (AFEMS). In 1986, CACI was one of the original developers of AFEMS, a worldwide online system to track all types of equipment. Now we are helping the Air Force consolidate all its equipment data under AFEMS—turning our legacy of support into new opportunities for both CACI and our client.

Whatever the need, CACI's engineering services will continue to enable the preservation of important legacy data, the integration of streamlined efficiencies, and the reduction of operational costs.

CACI has created a worldwide online system for the Air Force that tracks and consolidates all equipment, including fighter planes and support equipment enabling efficient cost control and logistics management.

Protecting the integrity of our nation’s information assets has become a top priority, grabbing headlines and the full attention of the White House. Leading the fight against increasing levels of cyber-crime and cyber-terrorism, CACI provides information assurance services that ensure the security of enterprise systems and the valuable information they carry.

At the CACI Information Assurance Technology Center in Chantilly, Virginia, our security experts employ every tool and emerging technology available to them to create innovative security solutions tailored to a client’s specific needs. We develop policy, procedures, and practices and build the technical architectures that ensure secure flow and management of information. Our services include vulnerability analysis, risk assessment, business continuity and disaster planning, systems certification and accreditation, regulatory compliance, and training.

Under a contract with the General Services Administration (GSA) Program Safeguard, we help the U.S. Customs Service implement enterprise-wide information assurance. CACI’s role is to support Customs in securing, at every level, the information systems and information that are vital to its critical mission. CACI has also assisted the U.S. Secret Service and the Office of Personnel Management with the certification and accreditation of their information systems. For the Navy, we have staffed their premier Computer Incident Response Team (CIRT) at the Norfolk, Virginia, Fleet Information Warfare Center since the team’s 1996 inception.

The common thread through all our support is that we always approach information assurance from the client’s perspective—seeking not just the best technology but also the best overall business plan—to ensure the confidentiality, integrity, and availability of critical information infrastructures and continuity of business operations.

CACI’s assistance to the U.S. Customs Service helps them secure their information systems to carry out their critical mission as the primary enforcement agency protecting U.S. borders.
