

★ A NATIONAL ASSET FOR NATIONAL SECURITY ★

CACI

EVER VIGILANT

2007 Annual Report

Ever Vigilant —

from operations abroad to challenges at home

As national missions evolve, CACI evolves with them. Through deep mission experience and proven thought leadership, our company anticipates national security requirements and provides the assets and solutions to meet them worldwide.

Ever vigilant, CACI has people and resources ready to respond rapidly and efficiently. This commitment positions CACI for the requirements ahead. As global terrorism enters new directions. As new threats arise in other theaters. As America faces heightened intelligence and homeland security challenges. As agencies work to advance the modernization of government services. And as new missions emerge in different arenas.

Solutions we provide to support national missions

Systems Integration

Designing, developing, and implementing large complex systems, including combat systems, command and control, and enterprise systems for finance, acquisition, human resources, and program management.

Managed Network Services

Designing, developing, operating, and maintaining global networks, focusing on special-purpose networks, secure transmission, and rapid deployment.

Intelligence Solutions

Specialized systems, information technology (IT), network, knowledge management, and security capabilities for intelligence requirements, plus critical subject matter expertise.

Knowledge Management

Services, analysts, and tools for rapidly compiling and managing vast amounts of data, often from multiple sources and in multiple formats, to generate timely, useful information.

Engineering Services

Complete acquisition, prototyping, test and evaluation, logistics, and maintenance systems and services, specializing in quick-reaction support.

FINANCIAL HIGHLIGHTS

Income Statement Data (in thousands, except per share data)

Year ended June 30	2007	% Change	2006

TO OUR CACI SHAREHOLDERS

(Left to right): Paul M. Cofoni, President and Chief Executive Officer, CACI International Inc and Dr. J.P. (Jack) London, Executive Chairman of the Board, CACI International Inc

In Fiscal Year 2007, we continued to operate in an increasingly competitive environment due to the continued prioritization of federal government funding in support of the conflict in Southwest Asia. By the end of the year, however, we had achieved record results in several key areas, providing us with a solid foundation for Fiscal Year 2008 and beyond. Our fundamentals remain strong and the long-term health of our company continues to be excellent. CACI's core business and focus of growth is in National Security, Defense, and Intelligence-related solutions. The trend lines of increased terrorist threats and worldwide weapons proliferation calls for enhanced competencies to meet these challenges — and CACI is the emerging Tier 1 leader.

Our significant accomplishments in FY07 include:

- A record level of contract awards totaling approximately \$3.3 billion, surpassing last year's level by 68 percent. These awards are a positive long-term indicator of the health of our company.
- Being awarded prime contractor positions on multiple award, multibillion-dollar contracts awarded by the U.S. Army and the Department of Homeland Security. Winning these awards strengthens our position as a top provider of professional services and information technology solutions to the U.S. Government.
- A record level of contract funding orders of approximately \$2.2 billion. This is the "fuel" that drives our revenue and earnings in the short term.
- Completing two acquisitions that had combined annual revenue of approximately \$120 million, that complement our professional services offerings, and expand our capabilities to provide services to the Department of Defense and the Intelligence Community.

As we entered Fiscal Year 2008, our total backlog was at a record year-end level of \$6.4 billion, a 39 percent increase over the previous year. Our funded backlog was also at a record year-end level — \$1.2 billion, a 22 percent increase over last year — and a positive near-term indicator of our revenue growth. At the end of Fiscal Year 2007, our domestic operations had over \$3.1 billion in submitted proposals under evaluation and a significant pipeline of qualified opportunities over the next 24 months, over half of which are worth more than \$100 million each. Our United Kingdom operations had another year of strong growth in revenue and pre-tax earnings.

All of these positive key indicators continue to underscore the excellent long-term prospects for our company.

Responding to a Competitive and Challenging Marketplace

In previous annual letters to you, we have commented on how our growth over the last several years has enabled us to compete against larger multibillion-dollar corporations; how we are changing and adapting our company to its larger status in the marketplace and size as a company; and how the federal marketplace continues to grow and become more competitive. Our accomplishments in FY07, outlined above, underscore our competitive position and the progress we have made to date in that regard. To maintain — and improve — that position, however, we must continue the process of transitioning CACI into a formidable, large Tier 1 competitor while retaining our agility.

The U.S. Federal Government is the largest consumer of professional and information technology services and solutions in the United States. According to the most recent data available, this has grown to over \$200 billion in contract actions awarded in 2006 to over 90,000 contractors. The funding of these services and solutions will continue to take place in a tightening fiscal climate. Certain trends — ones we must carefully monitor as we continue our growth initiatives — are currently affecting and will continue to affect the government's future spending for these services over the near term. There is an increased emphasis on strategic sourcing, in which our government customers are being directed to make business decisions about acquiring commodities and services more effectively and efficiently in order to leverage the government's purchasing power. The industry is seeing a renewed emphasis on "best value versus best price," where agencies are now assigned a target achievement goal to include contractor performance-based techniques into contracts to shift the risk from the government to the contractor.

Our industry is experiencing increased Congressional oversight and audit scrutiny at the government agency level that tends to introduce delays in the procurement

process. And, between now and the end of 2008, the industry will experience election year dynamics that may affect the appropriations process and, in turn, the timing of the release of funds to our customers for both existing and new work. To serve this dynamic and competitive marketplace and its trends, we must continue to be proactive and ready to adapt quickly.

Here's What We're Doing to Address These Challenges

To ensure our competitive position and continue to grow our revenue and profits, we have taken several important actions at the corporate level and in our operations. We have placed even more emphasis on hiring and retaining people by establishing a corporate-level human resources officer and building a recruiting team to support our operations. This has resulted in improved hiring and retention metrics. We have placed an increased emphasis on advancing our technology infrastructure and offerings to our government customers by appointing a chief technology officer. This is beginning to open new doors and expand our capabilities and services that have broad applications across our customer base. We are shaping and organizing our core competencies to make them more accessible for all our clients. We have appointed a corporate development officer to facilitate the strategic growth of our company through the combination of organic growth and mergers and acquisitions.

While we continue our emphasis on organic growth, our near-term growth will increasingly rely on CACI being a strategic consolidator of companies that complement our capabilities and customer reach in growing sectors of the federal government. In addition, we are strengthening the business development efforts of our U.S. operations by implementing account management processes that we believe will more efficiently leverage our diverse services and solutions across our customer base and improve our competitive position in obtaining new business to support our future growth. We believe these actions will help further the already strong position CACI has in the federal professional services marketplace.

Positioned for the Long Term

CACI is well positioned for long-term growth. We provide valuable services in the highest priority areas of government, including national security, intelligence, homeland security, and modernization of government services. Our solutions are critical to our customers' missions, and are at the forefront of our nation's security.

We are very proud of our experienced management team and our dedicated employees and the work they do helping our clients solve our country's most complex problems. We thank you, our shareholders, for your continuing support. We are confident that we will be able to build on our accomplishments and enhance shareholder value during Fiscal Year 2008.

Thought Leadership and Vital Resources to Prevail in a Dangerous World

America's wide-ranging **military** obligations are
critical in helping our nation to **counter global terrorism.**

Our nation's security demands readiness and swift action against a dedicated enemy fighting in a new era of asymmetric warfare. CACI provides the turn-on-a-dime capabilities, people, and processes to support this rapidly changing mission environment. We play a vital role in meeting the challenges ahead — for the warfighter in the field, for our global defense infrastructure, and for decision-makers throughout the chain of command.

Our steady support for our nation's warfighters is reflected in the confidence demonstrated by the missions entrusted to us by the Department of Defense (DoD). Work that has resulted, for example, in CACI meeting our five-year revenue projections for the U.S. Army's Strategic Services Sourcing program — the largest contract award in CACI's 45-year history — in just the first nine months of the award's ten-year duration.

Rapid-Deployment Communications — In Theater, On the Move

CACI is a leading communications network provider for the warfighter. Working with the U.S. Army, our project teams can rapidly deploy state-of-the-art communications infrastructure for high-visibility missions in remote tactical zones worldwide. This powerful capability opens vast opportunities for CACI in other defense programs, as well as in intelligence and homeland security. And in developing the "command post of the future," CACI has integrated sophisticated communications technology into military vehicles, enabling effective command and control capability.

Improved Logistics for Greater Efficiency, Reduced Cost

CACI is at the forefront in helping the U.S. Navy implement the Navy Enterprise Resource Planning Program. With its partners, CACI will help deploy a commercial product to replace hundreds of outdated IT legacy systems, resulting in greater information assurance, simplified training, lower operating costs, and more reliable deployment scheduling.

Training Troops for Asymmetric Warfare

The vicious, unconventional tactics of our adversaries have prompted the need for specialized training. Through our acquisition of The Wexford Group International, Inc., we field a uniquely experienced team of professionals who provide high-end training for our military. Often embedded with our deployed forces, they help troops gain the skills needed to counter non-traditional tactics and threats such as improvised explosive devices.

Covering the Pacific Theater From Mission Planning to Command and Control

Specialists from CACI staff the only Air and Space Operations Center in the entire DoD that is not manned by uniformed operators — supporting mission planning for units of the Pacific Air Forces. CACI also supports the critical information and infrastructure needs of the Pacific Command through work performed for the U.S. Army Pacific Theater's Network Operations Security Center, which helps coordinate the command's information sharing and dominance throughout the Pacific Area of Responsibility.

CACI provides the turn-on-a-dime capabilities, people, and processes to support our military's rapidly changing mission environment.

Agility and Integration

to Strengthen America's
First Line of Defense

Accurate **intelligence** preempts surprise
and enables good **national security** decisions,
whether in the White House or on the battlefield.

To support today's broad array of needs, intelligence operations must be agile, integrated, persistent, and secure. CACI delivers solutions that optimize intelligence capabilities ... helping to anticipate threats and contributing to the nation's defense.

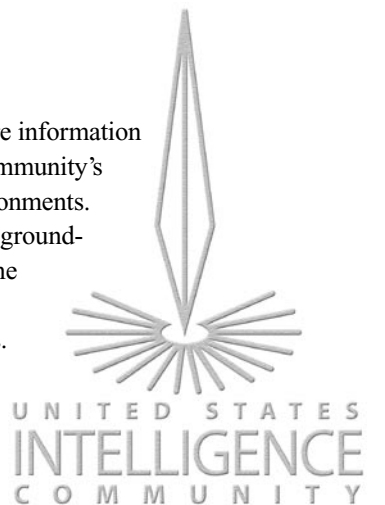

We possess the deep expertise and experience required to design and implement sophisticated information architectures and knowledge management solutions for the Intelligence Community. Our end-to-end intelligence capabilities and services encompass the entire life-cycle management of data — from sensor to exploitation, to conversion into knowledge, and timely delivery to decision-makers.

Smart Networks Protected by Trusted Access

CACI's systems integration solutions ensure secure information access and sharing in some of the Intelligence Community's most highly classified and sensitive network environments. Of particular value to intelligence activities is our ground-breaking development of applications that allow the integration of data for analysis, operations, and decision-making across multiple security domains.

Providing Enterprise-Wide Services and Support

CACI solutions provide agility and efficiency to support numerous Intelligence Community members in areas such as improving and measuring business processes, streamlining personnel records management, speeding deployments, and complying with newly legislated requirements. Our acquisition of the Institute for Quality Management, Inc., clearly strengthens these capabilities — adding a group of highly cleared professionals with intimate knowledge of intelligence business processes and associated needs.

Turning a World of Data Into Actionable Knowledge

The U.S. Army relies on CACI solutions to support its document exploitation mission. This work reflects the reliability and flexibility of our knowledge management approach, which enables information to be acquired in many forms from many sources, converted into usable formats, quality controlled, and then delivered to users in the formats they need for mission success. Our solutions bring order to data, increase opportunities for analytical discovery, and create actionable knowledge through improved content management and exploitation.

CACI's end-to-end intelligence capabilities and services encompass the entire life-cycle management of data.

Solutions and Technology

to Safeguard Our Nation
and Way of Life

The challenges of **homeland security**
will continue to be a **government priority** for years to come.

Minimizing the risk to people and critical infrastructure from both natural and man-made disasters is vital to national security — as is safeguarding our borders, coasts, and ports of entry. CACI solutions, capabilities, people, and mission experience are superbly aligned to serve these vital goals.

Combining our deep expertise in secure information sharing — the key components of defense and intelligence — with our interoperability and broadband wireless capabilities has made CACI a leading force serving the homeland security community. While the challenges ahead are formidable, we will continue to lead the way with assured information sharing across agencies and jurisdictions, refined by the insight of highly experienced CACI professionals.

Training Support and Enhanced Logistics Mean Full Speed Ahead for the U.S. Coast Guard

When a Coast Guard cutter captures a suspect ship, chances are the Guard's boarding crew learned the intricate maneuvers of safe, successful boarding from CACI professionals. Our experienced staff provides all the law enforcement training required by the Coast Guard, including ship boarding and takedowns. We also conduct specialized training exercises tailored to unique coastal settings and platforms. And as this domestic service upgrades its fleet of ships, it is transforming its logistics capabilities by moving to more efficient condition-based maintenance systems. CACI leads the development of this new approach, critical to upgrading preparedness for the Coast Guard's crucial homeland security missions.

Quick Reaction Prototyping — We Can Build IT Now

At special fabricating facilities, CACI engineers and designers create quick-reaction prototypes, then integrate them into vehicles and platforms for special purposes. These include vehicles equipped to support homeland security or emergency management operations, or command and control military combat operations worldwide. Our technicians are skilled at integrating a wide range of sensors into vehicles for a range of applications, including emergency response to potential attacks on the U.S. homeland, as well as chemical, biological, radiological, and nuclear monitoring and analysis for use domestically and in combat zones.

Protecting the People Who Protect Our Nation's Airports

CACI provides program management support services to implement and maintain an effective safety and health program for approximately 45,000 employees of the Transportation Security Administration (TSA). Covering workers at the agency's headquarters, five regional offices, and more than 400 airports nationwide, the program helps ensure that the TSA provides the highest-quality support to safeguard our country's protectors serving on the front line at our airports.

CACI serves the vital national goals of minimizing the risk to people and critical infrastructure from both natural and man-made disasters, as well as safeguarding our borders, coasts, and ports of entry.

Maximum Value and Innovation to Enhance the Modernization of Services

The pieces are in place for renewed **information technology**
growth in the **federal marketplace**.

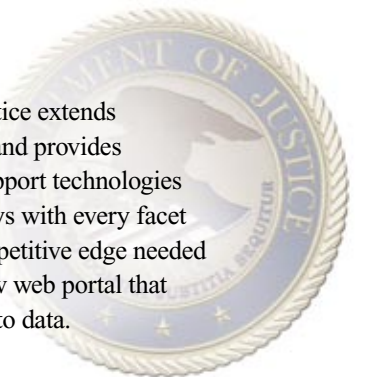

Forecasts predict steady growth in IT budgets through 2012*, and transformation initiatives are still unfolding. The goal continues to be using IT solutions to do more with less and to document return on IT investments. To achieve these goals, transformation solutions have given high priority to service-oriented architectures and process improvement.

CACI is strategically positioned to help defense and civilian agencies migrate from legacy IT systems and networks to service-oriented architecture environments capable of supporting transformational enterprise and mission strategies and applications. Our application of the Capability Maturity Model® Integration (CMMI®), ISO 9001, and ISO 20000 standards that CACI has achieved also assures clients of the highest-quality solutions.

CACI is at the forefront of acquisition and procurement transformation for the Department of Defense, guiding major programs like the DoD's Standard Procurement System and Wide Area Workflow. Our transformation solutions have supported the Department of Defense for years. And because we can demonstrate the success and value of these programs, more and more defense and civilian agencies turn to CACI for proven transformation support.

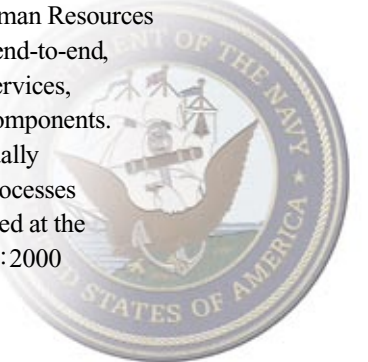

A Mega Leap Forward for Justice

The Mega 3 contract with the U.S. Department of Justice extends a relationship with CACI that stretches back to 1978 and provides the department with the latest automated litigation support technologies and services. CACI support will assist Justice attorneys with every facet of the litigation life cycle, supplying them with a competitive edge needed to win or settle their cases. The solution features a new web portal that significantly accelerates litigation support and access to data.

Strategic Teaming Creates New Opportunities with the Navy

An assignment from the U.S. Navy's Space and Naval Warfare Systems Command to provide technical support of Navy-wide IT systems in its New Orleans Systems Center reflects an innovative approach to implementing this work. CACI formed a joint venture with ActioNet, Inc., named eVenture Technologies, LLC, to comply with requirements for a small-business set-aside. It supports the development and integration of the Defense Integrated Military Human Resources System for Personnel and Pay, which will provide an end-to-end, integrated personnel and pay system for all military services, including their Active, Reserve and National Guard components. The alliance leverages the partners' credentials to actually exceed the client's critical requirement for software processes rated at CMMI Level 2 — CACI and ActioNet are rated at the higher CMMI Level 3 and have also earned ISO 9001:2000 certification for quality management.

Medical Readiness When Disaster Strikes

As a prime contractor to the U.S. Air Force, CACI supports the information system that provides medical logistics, facility management, and medical maintenance support for all U.S. Armed Forces at medical facilities worldwide. National Guard units have also employed the technology to support medical provisioning that ensures readiness for natural disasters and other mass-casualty emergencies.

CACI is strategically positioned to help defense and civilian agencies migrate from their legacy IT systems and networks to service-oriented architecture environments.

Assets and Vision

to Manage a New Generation
of Evolving Challenges

Today, CACI focuses its **core business strategy** on the
four **priority mission areas** of the federal government.

National defense, intelligence, homeland security, and government transformation parallel CACI's core strengths and offer the greatest opportunity for our company. They will remain our primary business directions for the future.

But we fully understand that new growth areas are rapidly emerging, especially in the civilian government sector, which will take CACI into exciting new directions. Our work with the U.S. Department of Housing and Urban Development and growing leadership in medical logistics clearly set the stage for increasing CACI's business in support of other vital national priorities. From operations abroad to challenges at home, CACI is working to ensure national security as we help protect the quality of life for citizens.

Better Housing and Economic Opportunities for Those Who Need It Most

CACI is supporting the Department of Housing and Urban Development to modernize the information technology systems that enable the agency to develop viable communities by providing housing, a suitable living environment, and expanded economic opportunities for people with low and moderate income. To help meet these critical national priorities, CACI will use our information technology and program management expertise to integrate existing systems with new technologies — enhancing operational efficiency and increasing productivity, while reducing costs.

Saving Lives and Lowering Costs to Improved Critical Care

Already an established name in DoD medical logistics, CACI also serves a growing list of private sector healthcare organizations in the civilian healthcare arena. By supporting VISICU in implementing its innovative eICU® Program, we are helping to transform our national healthcare system through improved critical care delivery, yielding improved outcomes and cost efficiency. VISICU is currently serving more than 250,000 patients annually in more than 180 hospitals — saving patient lives and reducing their hospital stays while improving provider staff satisfaction and hospital operational costs.

Helping U.S. Brands Find a Place in the United Kingdom

Marketing professionals in CACI's offices in the United Kingdom (U.K.) are experts in all aspects of managing current and future store networks, performing work for such well-known international brands as SUBWAY®, as well as leading U.K. companies. We develop in-depth analysis of individual locations and provide strategic guidance on how to get the best returns from clients' store portfolios, while following the most appropriate road map for growth in the U.K. as well as the European marketplace overall.

CACI is growing in exciting directions as new growth areas rapidly emerge, especially in the civilian government sector and healthcare arena.
