

CACI to Showcase Deep Learning Solutions at 18th Advanced Maui Optical and Space Surveillance Technologies Conference

Arlington, Va., September 14, 2017 - CACI International Inc ([NYSE: CACI](#)) will showcase its deep learning solutions at the [18th Advanced Maui Optical and Space Surveillance Technologies Conference \(AMOS\)](#) September 19-22 at the Wailea Marriott, Maui, HI. AMOS is the premier technical conference in the nation devoted to space surveillance. The annual event brings together leaders, researchers, technologists, system developers, and operators from industry, the military, and academia involved in space situational awareness.

As the number and type of satellites orbiting the earth grows, the need for rapid identification and classification of space objects has become more acute. CACI is leveraging its expertise in technologies that include digital signal processing, deep learning, and cyber analytics to speed the process of identification, while reducing the time necessary for decision-making and action. CACI's demonstration will illustrate the power of deep learning – a subset of machine learning – as it relates to the automated identification of vast quantities of objects in space. Visit the CACI booth to view the demonstration and learn more about CACI's expertise in launching, maintaining, and defending space enterprise assets both in the orbit and on the ground.

For more information on CACI's space operations and resiliency capabilities, visit www.caci.com/space.
