

## **CACI to Showcase Solutions at AUSA Annual Meeting That Enhance U.S. Army Readiness in Today's Multi-Domain Battle**

Arlington, Va., October 5, 2017 - CACI International Inc ([NYSE: CACI](#)) will showcase solutions to support America's forces at the [Association of the U.S. Army \(AUSA\) Annual Meeting and Exposition](#) on October 9-11, 2017 at the Walter E. Washington Convention Center, Washington, DC. The annual conference brings together Army leadership, industry experts, academia, and land power specialists from around the world to discuss the issues and challenges facing the U.S. and the defense community today.

In keeping with this year's conference theme, "Building Readiness: America's Army from the Great War to the Multi-Domain Battle," CACI will showcase innovative solutions that support the soldier today and Army's enduring priority to advance technologies that improve readiness in today's multi-domain battle.

These solutions include a full suite of industry-leading electronic warfare (EW) capabilities that enhance soldier effectiveness and survivability in the battle across land, sea, air, space, and cyberspace. Products within CACI's EW suite include SkyTracker™, a counter-UAS system that detects, identifies, and tracks commercial drone threats around bases or large areas of interest; BEAM, a soldier-wearable sensor that equips dismounted Army and Marine infantry squads with surveillance, reconnaissance, and EW capabilities; the Air Vigilance pod for intelligence, surveillance, and reconnaissance; and other defensive cyber capabilities for enhanced situational awareness and mission management.

CACI's software-defined solutions are modular and scalable, using open architectures to quickly develop new capabilities against evolving threats. Cognitive, autonomous, and integrated solutions enable maximum unit effectiveness, resulting in a more sophisticated and decisive capability for commanders.

In addition to its suite of EW capabilities, CACI will also showcase next-generation IT and secure communications for the battlefield; unique multi-intelligence analytic and visualization tools; full-motion video analysis capabilities for improved mission planning; Agile development and DevSecOps methodologies to modernize mission applications and business systems; a product lifecycle management solution that turns complex data and analysis into actionable information for enhanced readiness; an integrated Army pay and personnel system; software integration on a mobile tactical platform with limited or disadvantaged communications; and high-quality chief information officer consulting services for more effective and efficient government IT, business, and mission operations.
