

NUS-710DU0CF

The NUS-710DU0CF Card File is a 19" rack with card guides and connectors. It is a form/fit/function replacement for the obsolete Rosemount 710 card file.

The NUS card file has been modified to address some structural problems found with the Rosemount design – the rear panel was not stiff enough, and over time would bow, making it difficult to fully seat the trip units rear connector into the connector on the card file. This has been corrected in the NUS design.
