

Feel the Beat: Logitech Unveils Premium Drum Controller for Guitar Hero

Logitech Wireless Drum Controller Licensed for the PLAYSTATION 3 Computer Entertainment System

FREMONT, Calif., Jul 15, 2009 (BUSINESS WIRE) -- So you can really rock out to Guitar Hero(R) on the PLAYSTATION(R)3 (PS3) computer entertainment system, Logitech (SIX:LOGN) (NASDAQ:LOGI) today introduced the [Logitech\(R\) Wireless Drum Controller for the PLAYSTATION 3 system](#). Licensed by Activision Publishing, Inc. (NASDAQ: ATVI), for the award-winning Guitar Hero franchise, the Wireless Drum Controller features premium drum heads with recessed rims - making it easy for you to play like a rock star.

"When you're ready to experience a new premium drum controller or expand your band, you'll want to rip on Logitech's new drum controller," said [Ruben Mookerjee](#), Logitech's director of product marketing for gaming. "With the Wireless Drum Controller, you can mark time, keep the backbeat, color up your riffs and crash down on the cymbal pads. Joining the Logitech (R) Wireless Guitar Controller, the new Wireless Drum Controller lets you rock out to your favorite songs on the PS3 system."

The Logitech Wireless Drum Controller features three fully adjustable drum heads and two cymbal pads. Each piece can be positioned to fit your reach and suit your style. Offering a unique playing experience, the new Logitech Wireless Drum Controller provides quiet, responsive heads that deliver a lively feel, won't distract you from the music, and are designed to let you take advantage of all the latest features of Guitar Hero games.

But Logitech did not just replicate typical drum heads. The recessed rims help make it easier to score points and avoid accidental rim shots. The kick pedal uses a stainless steel surface and an adjustable spring - providing a highly durable, responsive drumming experience.

Delivering up to 50 hours of battery life on two AA batteries, the Wireless Drum Controller gives you enough juice to perform a concert's worth of hits, encores included.

Compatible with the PS3 system as well as the PlayStation(R)2 system, the Wireless Drum Controller uses a 2.4 GHz wireless USB receiver, so the connection is as steady as a drum beat. When you're ready to play, the Logitech Wireless Drum Controller sets up quickly and folds flat in seconds. You can start playing within minutes of opening the box and when the show is over, the set can be easily stowed away. (Roadies are not required.)

Pricing and Availability

The Logitech Wireless Drum Controller for the PS3 system is expected to be available in the U.S. beginning in July and Europe beginning in August for a suggested retail price of \$229.99 (U.S.).
