## Type with Light on Logitech's New Solar Keyboard for Mac, iPad and iPhone

With One Button, You Can Switch Between Typing on Three Apple Devices

NEWARK, Calif.--(BUSINESS WIRE)-- Today Logitech (SIX:LOGN) (NASDAQ:LOGI) announced the expansion of its solar offering with the new [Logitech® Wireless Solar Keyboard K760](#) for Mac®, iPad® or iPhone®. A continuation of Logitech's solar series, which started with the [Logitech® Wireless Solar Keyboard K750](#) and has continued with the [Logitech® Solar Keyboard Folio](#) for iPad, this new keyboard adds Bluetooth® connectivity with an easy-switching capability. It allows you to simultaneously pair multiple devices and quickly switch among them with the push of a button.

"Laptops, smartphones and tablets are ubiquitous — both at work and at play," said Denis Pavillard, vice president of experience design at Logitech. "Because Apple devices are central to this trend, Logitech is committed to improving the way people interact with them. With its simple solar charging, familiar Mac layout and comfortable design, the Logitech Wireless Solar Keyboard K760 will appeal to Apple users worldwide."

The Logitech Wireless Solar Keyboard K760 is stylish and compact with onboard cells that are powered by light for hassle-free charging. With its easy-switching Bluetooth connection, you can pair your keyboard to as many as three devices and switch among them without having to reconnect. This means you can move from typing on your Mac to your iPad to your iPhone — and back again — with the simple push of a button.

K760 features a slim, minimalist design and Mac-specific keys, including Command, Brightness, Eject and more. The unique Logitech concave key design gives you more comfortable and quiet typing, and offers more speed and precision than typing on an on-screen keyboard.

And, with its environmentally friendly PVC-free construction, fully recyclable box and onboard cells for charging, this keyboard is designed to minimize its environmental footprint. Similar to the existing Logitech Solar Keyboards, you can charge this keyboard in any light — low light or lamp light, indoors or outdoors. Fully powered, the keyboard works for at least three months, even in total darkness (based on average use per day of eight hours).

### Pricing and Availability

The Logitech Wireless Solar Keyboard K760 is expected to be available in the U.S. and Europe beginning in June 2012, for a suggested retail price of \$79.99. For more information please visit [www.logitech.com](http://www.logitech.com) or our [blog](#).

### About Logitech

Logitech is a world leader in products that connect people to the digital experiences they care about. Spanning multiple computing, communication and entertainment platforms, Logitech's combined hardware and software enable or enhance digital navigation, music and video entertainment, gaming, social networking, audio and video communication over the Internet, video security and home-entertainment control. Founded in 1981, Logitech International is a Swiss public company listed on the SIX Swiss Exchange (LOGN) and on the Nasdaq Global Select Market (LOGI).

Logitech, the Logitech logo, and other Logitech marks are registered in Switzerland and other countries. All other trademarks are the property of their respective owners. For more information about Logitech and its products, visit the company's website
