NOTES TO FINANCIAL STATEMENTS

NOTE 1 **Summary of Significant Accounting Policies and Going Concern**

A. Accounting Practices
The financial statements of American Bankers Insurance Company of Florida (the “Company”) are presented on the basis of accounting practices prescribed or permitted by the National Association of Insurance Commissioners (“NAIC”) and the Florida Office of Insurance Regulation (“FLOIR”).

The FLOIR recognizes only statutory practices prescribed or permitted by the state of Florida for determining and reporting the financial condition and results of operations of an insurance company and its solvency under the Florida Insurance Law. The NAIC’s Accounting Practices and Procedures Manual (“SAP”), has been adopted as a component of prescribed or permitted practices by the state of Florida except to the extent that state law may differ or that state rules or regulations require differences in reporting not related to accounting practices and procedures. The Company has no differences in statutory surplus or net income. The Florida Commissioner of Insurance has the right to permit other specific practices that deviate from prescribed accounting practices. The Company has no prescribed or permitted practices.

A reconciliation of the Company’s net income and capital and surplus between NAIC SAP and practices prescribed and permitted by the state of Florida is shown below:

B. Use of Estimates in the Preparation of the Financial Statements
The preparation of financial statements in conformity with Statements of Statutory Accounting Principles (“SSAP”) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities. The most significant items on the Company’s financial statements affected by the use of estimates are investments, reinsurance recoverables, deferred income taxes, losses, loss adjustment expenses, unearned premiums, and commitments and contingencies. Actual results could differ from those estimates. The Company believes the amounts reported are reasonable and adequate.

C. Accounting Policy
Premiums are earned principally on a monthly pro-rata basis over the contract period that the related policies are in-force. The portion of premiums not earned at the end of the period is recorded as unearned premiums. Commissions due to agents are based on policy writings and are expensed when earned by agents of the Company. Additional contingent commissions due to agents are recorded as due under the terms of contracts between the Company and its agents. Other costs directly related to acquiring business, such as underwriting salaries, premium taxes and other expenses are charged to expense as incurred.

In addition, the Company uses the following accounting policies:

- (1) Short-term investments are stated at cost or amortized cost.
- (2) Bonds, other than asset-backed and structured securities and perpetual bonds, are generally stated at amortized cost using the modified scientific interest method of amortization. Bonds that are deemed ineligible to be held at amortized cost based upon the bond’s assigned NAIC designation are held at the lower of amortized cost or fair value. Perpetual bonds that are not callable or that have passed all currently effective call dates are reported at fair value. Perpetual bonds with a current effective call date are reported at amortized cost.
- (3) Common stocks are stated at fair value except that investments in stocks of uncombined subsidiaries and affiliates, in which the Company has an interest of 20% or more, are carried in accordance with SSAP No. 97.
- (4) Redeemable preferred stocks are carried at cost, lower of cost or amortized cost, or fair value depending on the assigned NAIC designation. Perpetual preferred stocks are reported at fair value, not to exceed any currently effective call price.
- (5) Mortgage loans on real estate are stated at their unpaid principal balance, net of unamortized premium or discount, less valuation allowances. Valuation allowances are established for mortgage loans that are considered impaired by management and recorded based on the difference between collateral value less estimated sales cost and amortized cost of the loan. Mortgage loans for which foreclosure is probable are stated at the value of the underlying collateral less estimated sales cost.
- (6) Asset-backed and structured securities are stated at amortized cost using the modified scientific interest method of amortization including anticipated prepayments. The retrospective method is used to account for all securities where it is probable all contractual cash flows will be collected. The prospective method is used to account for all securities where collection of all contractual cash flows is not probable.
- (7) Affiliated common stocks are reported at the statutory equity value as prescribed by SSAP 97 – Investments in Subsidiary, Controlled and Affiliated (“SCA”) Entities. The Company owns 100% of the common stock of American Bankers General Agency, Inc.
- (8) The Company’s investments in partnerships are reported using the equity method of accounting. In applying the equity method, the Company uses financial information provided by the investee, generally on a three month lag. Residual tranches are reported at the lower of cost or fair value.
- (9) The Company has no investments in derivative instruments.
- (10) The Company utilizes anticipated investment income as a factor in the premium deficiency reserve calculation.
- (11) Unpaid losses and loss adjustment expenses include an amount determined from individual case estimates and loss reports and an amount, based on past experience, for losses incurred but not reported (“IBNR”). Such liabilities are based on assumptions and estimates and while management believes the amount is adequate, the ultimate liability may be in excess of or less than the amount provided. The methods for making such estimates and for establishing the resulting liabilities are continually reviewed and any adjustments are reflected in the period determined.
- (12) The Company has not modified its capitalization policy.
- (13) The Company has no pharmaceutical rebate receivables.

NOTE 2 Accounting Changes and Corrections of Errors

Correction of Errors

In accordance with the SSAP No. 3, Accounting Changes and Corrections of Errors, paragraph 10, correction of all accounting errors in previously issued financial statements, for which an amended financial statement was not filed, are reported as adjustment to unassigned funds (surplus) in the period an error is detected.

Assessment factors include, but are not limited to, the extent to which the fair value is less than amortized cost, the financial condition and rating of the issuer, whether any collateral is held, and the intent and ability of the Company to retain the investment for a period of time sufficient to allow for recovery. In performing the other-than-temporary impairment analysis the net present value is calculated by discounting the Company's best estimate of projected future cash flows at the effective interest rate implicit in the security prior to impairment at the balance sheet date. Cash flow estimates vary based on assumptions regarding the underlying collateral including default rates, recoveries and changes in value.

NOTE 20 Fair Value Measurements

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Company has categorized its financial instruments into a three-level fair value hierarchy based on the priority of the inputs to the valuation technique. Investments reported at Net Asset Value (NAV) shall not be captured within the fair value hierarchy, but shall be separately identified.

The levels of the fair value hierarchy are described below:

Level 1 inputs utilize quoted prices (unadjusted) in active markets for identical financial instruments that the Company can access.

Level 2 inputs utilize other than quoted prices included in Level 1 that are observable for the financial instrument, either directly or indirectly, for substantially the full term of the financial instrument. Level 2 inputs include quoted prices for similar financial instruments in active markets, quoted prices for identical or similar financial instruments in markets that are not active and inputs other than quoted prices that are observable in the marketplace for the financial instrument. The observable inputs are used in valuation models to calculate the fair value for the financial instrument.

Level 3 inputs are unobservable but are significant to the fair value measurement for the financial instrument, and include situations where there is little, if any, market activity for the financial instrument. These inputs reflect management’s own assumptions about the assumptions a market participant would use in pricing the financial instrument.

ANNUAL STATEMENT FOR THE YEAR 2025 OF THE AMERICAN BANKERS INSURANCE COMPANY OF FLORIDA

NOTES TO FINANCIAL STATEMENTS

(4) For all classes of financial instruments measured at fair value, the market approach is generally used. The market approach valuation technique uses prices and other relevant information generated by market transactions involving identical or comparable assets.

The following is a summary of the significant valuation techniques for financial instruments measured and/or reported at fair value. Inputs do not differ if the financial instrument is reported at amortized cost or fair value.

Bonds, preferred and common stocks

Level 1

Level 1 assets are publicly listed and are actively traded in an established market.

Level 2

Bonds are valued using various observable market inputs obtained from a pricing service or asset manager. They prepare estimates of fair value measurements for the Company's Level 2 assets using proprietary valuation models based on market approach valuation techniques such as matrix pricing which include observable market inputs. The extent of the use of each observable market input depends on the type of asset and the market conditions at the reporting date. The priority of the use of observable market inputs may change as some observable market inputs may not be relevant or additional inputs may be necessary. The following observable market inputs ("standard inputs"), listed in the approximate order of priority, are utilized in the pricing evaluation of Level 2 assets: benchmark yields, reported trades, broker/dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers and reference data including market research data. To price asset-backed and structured securities, the pricing service uses vendor trading platform data, new issue data, monthly payment information and collateral performance inputs in addition to the standard inputs. The pricing service or asset manager also evaluates each financial instrument based on relevant market information including: relevant credit information, perceived market movements and sector news. A non-pricing service source prices certain privately placed corporate bonds using a model with observable inputs including, but not limited to, credit quality by sector, average life, and the capital size of the issuer . Preferred stocks are priced by the Company's pricing vendor utilizing observations of equity and credit default swap curves related to the issuer in addition to the standard inputs.

Level 3

The Level 3 bonds and stocks, excluding certain privately placed bonds, are priced using non-binding third-party quotes, for which the underlying quantitative inputs are not developed by the Company and are not readily available or observable. For certain privately placed bonds, the fair values are originated by the internal asset manager and may incorporate significant unobservable inputs.

Mortgage loans

The fair value of mortgage loans are estimates provided by the Company's third-party investment manager using a matrix pricing model. For fixed rate loans, the matrix process uses a yield buildup approach to create a pricing yield, with components for base yield, credit quality spread, property type spread, and a weighted average life spread. Floating rate loans are priced with a target quality spread over the swap curve. A dollar price for each loan is derived from the pricing yield or spread by a discounted cashflow methodology in a vendor application.

Cash and cash equivalents

The reported carrying value approximates fair value because of the short maturity of the instruments.

Contingent liabilities

The fair value of the contingent liabilities are estimated using a discounted cash flow model. Inputs include future business performance and a discount rate utilizing credit spreads and applicable U.S. Treasury rates.

Other invested assets

The fair values of surplus notes, capital notes and debt securities that do not meet the classification of bonds are estimated by an independent pricing service using model based valuation techniques. Inputs used include market trades, market observable inputs, sector news and relevant credit information. The residual tranches fair values are originated by the internal asset manager and may incorporate significant unobservable inputs. The reported carrying value for tax credits approximates their fair value.

Valuation techniques used by the pricing service can change period to period, depending on the appropriate observable inputs that are available at the reporting date to price the financial instruments. For the reporting periods presented, the application of the valuation technique applied to the Company's classes of financial instruments measured at fair value has been consistent.

The Company generally obtains one price for each financial instrument. The Company regularly assesses if the evaluated prices represent a reasonable estimate of their fair value. This process involves quantitative and qualitative analysis and is overseen by investment and accounting professionals. Examples of procedures performed include, but are not limited to, initial and on-going review of pricing service methodologies, review of the prices received from the pricing service, review of pricing statistics and trends, and comparison of prices for certain securities with two different appropriate price sources for reasonableness. Following this analysis, the Company generally uses the best estimate of fair value based upon all available inputs. On infrequent occasions, a non-pricing service source may be more familiar with the market activity for a particular security than the pricing service. In these cases the price used is taken from the non-pricing service source. The pricing service provides information to indicate which securities were priced using market observable inputs so that the Company can properly categorize its financial instruments in the fair value hierarchy.

(5) The Company has no investments in derivative instruments.

C. Aggregate Fair Value Disclosures and Level Within the Fair Value Hierarchy

In March 2023, the company entered into an amendment to a reinsurance agreement whereby American Bankers Insurance Company would cede certain extended warranty service contracts for additional producers on a quota share basis to Tricor Reinsurance Company, Ltd. The effective dates of the underlying contracts for these producers being ceded by ABIC commenced to the start of the contract of 1/1/2021. Based on the execution date of the amendment relative to the earliest effective dates of the underlying reinsured contracts, it is concluded that the Tricor Reinsurance Company, Ltd. amendment agreement contained material retroactive reinsurance provisions.

In 2023, the Company entered into a loss portfolio transfer ("LPT") reinsurance treaty with Allianz relating to the small commercial liability business based upon reserves as of March 31, 2023 which resulted in a \$4,999,933 million loss recorded as an aggregate write in in the Statement of Income. Allianz agreed to assume \$25,768,067 million in liabilities as part of the LPT, which represents the recorded loss reserves and allocated loss adjustment expense reserves on these policies as of March 31, 2023. Per the terms of the contract, there was \$4,999,933 million of additional risk premium to be paid to Allianz which represents consideration for the uncertainty of future claims development.

NOTE 33 Asbestos/Environmental Reserves

If the Company is potentially exposed to asbestos and/or environmental claims, full disclosure of the reserving methodology for both case and IBNR reserves is required. Disclosure of the amount paid and reserved for losses and LAE for asbestos and/or environmental claims, on a direct, assumed, and net of reinsurance basis, is also required. The reserves disclosed in this note exclude amounts relating to policies specifically written to cover asbestos and environmental exposures. Policies specifically written to cover these exposures include: Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability.

A. A.Does the Company have on the books, or has it ever written an insured for which you have identified a potential for the existence of, a liability due to asbestos losses?

Yes (X) No ()

If yes, describe the lines of business written for which there is potential exposure, the nature of the exposure or exposures and the Company's methodology for reserving for both reported and IBNR losses.

The Company has exposure to asbestos claims. This exposure arises from the Company's participation in various reinsurance pools during the years 1971 through 1980.

Determining the ultimate liabilities on actuarial estimates is difficult for several reasons. Among these reasons are a general lack of sufficiently detailed data, reporting delays, absence of a generally accepted actuarial methodology for these exposures, and significant unresolved legal issues including such items as whether coverage exists, what constitutes an occurrence, etc. In addition, the determination of ultimate damages and the final allocation of losses to financially responsible parties are highly uncertain. Any estimation of these liabilities is subject to greater than normal variation and uncertainty.

The Company estimates the impact of the asbestos exposure by carrying case basis reserves as recommended by our various pool managers. In addition, the Company carries IBNR bulk reserves for its asbestos and environmental business combined, which results in a survival ratio (excluding commutations) of approximately 8.1 years in 2025 compared to 9.3 years in 2024 and 9.4 years in 2023. The Company has hired consulting firms in the past to perform reserve studies on the asbestos and environmental liabilities, and the last study was completed in 2015. If the actual loss run-off experience deviates from Management's expectations, the Company would consider hiring consulting firms to update this analysis in the future. Management believes that its estimate of IBNR for the asbestos and environmental business is adequate. The Company's estimating and reserving practices are reviewed on a regular basis. Subsequent adjustments to the original estimates are made when determinable and are reflected in the current year operations.

The Company's asbestos-related losses (including coverage dispute costs) for each of the five most recent calendar years for losses and loss adjustment expenses were as follows:
