Non-GAAP Financial Measures

Assurant uses the following non-GAAP financial measures to analyze the company's operating performance. Assurant's non-GAAP financial measures should not be considered in isolation or as a substitute for GAAP financial measures. Because Assurant's calculation of these measures may differ from similar measures used by other companies, investors should be careful when comparing Assurant's non-GAAP financial measures to those of other companies.

- (1) **Adjusted EBITDA:** Assurant uses Adjusted EBITDA as an important measure of the company's operating performance. Assurant defines Adjusted EBITDA as net income, excluding net realized gains (losses) on investments and fair value changes to equity securities, interest expense, benefit (provision) for income taxes, depreciation expense, amortization of purchased intangible assets, as well as other highly variable or unusual items, including restructuring costs and the loss on a subsidiary held for sale. The company believes this metric provides investors with an important measure of the company's operating performance because it excludes items that do not represent the ongoing operations of the company, and therefore (i) enhances management's and investors' ability to analyze the ongoing operations of its businesses and (ii) facilitates comparisons of its operating performance over multiple periods, including because the amortization expense associated with purchased intangible assets may fluctuate from period to period based on the timing, size, nature and number of acquisitions. Although the company excludes amortization of purchased intangible assets from Adjusted EBITDA, revenue generated from such intangible assets is included within the revenue in determining Adjusted EBITDA. The comparable GAAP measure is net income. See Note 2 below for a full reconciliation.
- (2) **Adjusted EBITDA, Excluding Reportable Catastrophes:** Assurant uses Adjusted EBITDA (defined above), excluding reportable catastrophes (which represents individual catastrophic events that generate losses in excess of \$5.0 million, pre-tax, net of reinsurance and client profit sharing adjustments and including reinstatement and other premiums), as another important measure of the

company's operating performance. The company believes this metric provides investors with an important measure of the company's operating performance for the reasons noted above, and because it excludes reportable catastrophes, which can be volatile. The comparable GAAP measure is net income.

- (3) Adjusted Earnings per Diluted Share: Assurant uses Adjusted earnings per diluted share as an important measure of the company's stockholder value. Assurant defines Adjusted earnings per diluted share as net income, excluding net realized gains (losses) on investments and fair value changes to equity securities, amortization of purchased intangible assets, as well as other highly variable or unusual items (including the items mentioned above), divided by the weighted average diluted shares outstanding. The company believes this metric provides investors with an important measure of stockholder value because it excludes items that do not represent the ongoing operations of the company, and therefore (i) enhances management's and investors' ability to analyze the ongoing operations of its businesses and (ii) facilitates comparisons of its operating performance over multiple periods, including because the amortization expense associated with purchased intangible assets may fluctuate from period to period based on the timing, size, nature and number of acquisitions. Although the company excludes amortization of purchased intangible assets from Adjusted earnings, revenue generated from such intangible assets is included within the revenue in determining Adjusted earnings. The comparable GAAP measure is net income per diluted share, defined as net income, divided by the weighted average diluted shares outstanding. See Note 4 below for a full reconciliation.
- (4) Adjusted Earnings, Excluding Reportable Catastrophes, per Diluted Share: Assurant uses Adjusted earnings, excluding reportable catastrophes, per diluted share (each as defined above) as another important measure of the company's stockholder value. The company believes this metric provides investors with an important measure of stockholder value for the reasons noted above, and because it excludes reportable catastrophes, which can be volatile. The comparable GAAP measure is net income per diluted share (defined above).

(5) Constant Currency: Represents a non-GAAP financial measure. Excludes the impact of changes in foreign currency exchange rates used in the translation of the income statement because they can be volatile. These amounts are calculated by translating the comparable prior period results at the weighted average foreign currency exchange rates used in the current period, and it excludes the impact of foreign exchange transaction gains (losses) associated with the remeasurement of non-functional currencies. The company believes this information allows investors to identify the significance of changes in foreign currency exchange rates in period-to-period comparisons.

Percentage change in Adjusted EBITDA, including FX impact	14.4 %	16.2 %

- (6) The company outlook for each of Adjusted earnings, excluding reportable catastrophes, per diluted share and, for Assurant and Global Housing, Adjusted EBITDA, excluding reportable catastrophes, each including and excluding 2025 prior year development, constitute forward-looking non-GAAP financial measures and the company believes that it cannot, without unreasonable efforts, forecast certain information needed to reconcile such forward-looking non-GAAP financial measures to the most comparable GAAP measure, the probable significance of which cannot be determined. The company is able to quantify a full-year estimate of depreciation expense, interest expense and amortization of purchased intangible assets, each on a pre-tax basis, and the estimated effective tax rate, which are expected to be approximately \$175 million, \$113 million, \$70 million and 20 to 22 percent, respectively. Other GAAP components cannot be reliably quantified due to the combination of variability and volatility of such components and may, depending on the size of the components, have a significant impact on the reconciliation.
